

RF Manual 15th edition

Application and design manual
for High Performance RF products
May 2011

NXP's RF Manual makes design work much easier

NXP's RF Manual is one of the most important reference tools on the market for today's RF designers. It features our complete range of RF products, from low- to high-power signal conditioning and high-speed data converters.

High Performance RF for the most demanding applications

When it comes to the most demanding RF applications, the first thing on the designer's mind is to meet the specified performance. So that is exactly what NXP enables you to do, with the added benefits of silicon-based, volume manufacturing process technologies. That means you can design your systems to the highest specifications, while still retaining potential trade-offs with respect to efficiency, power, ruggedness, consistency, and integration levels.

Shipping more than four billion RF products annually, NXP is a clear industry leader in High Performance RF. From satellite receivers, cellular base stations, and broadcast transmitters to ISM (Industrial, Scientific, and Medical) and aerospace and defense applications, you will find the High Performance RF products you need at NXP. And constant innovation ensures you always have the most effective solutions at your fingertips – whether it's innovative Doherty power amplifier architectures, JESD204A CGV™ serialized data interfaces, or tiny GPS LNAs.

So if you're looking to improve your RF performance, design a highly efficient signal chain, or break new ground with an innovative ISM application, then NXP's creative thinking and expert support can help you every step of the way.

High Performance RF design challenge

The day-to-day work offers many challenges to the RF designer, from the high diversity of signals to integration, or simply the time spent. We recently started a design challenge (www.hprf-design-challenge.nxp.com). It offers a forum for RF enthusiasts to walk with us through the steps of a design, from concept to prototype. This is, in essence, the goal of the RF Manual – to make design work easier.

What's new?

This RF Manual provides updated information on RF applications clustered in different segments. The segments are as follows: wireless and broadband communication infrastructure, TV and satellite, portable devices, automotive, ISM, and aerospace and defense.

We describe in detail the new developments in our core technologies, QUBiC4 and LDMOS. We have also added GaN technology to our product offering; this key technology lets high-power amplifiers deliver very high efficiency in next generation wireless communication systems.

New products include GaN power amplifiers, a complete line of overmolded plastic (OMP) RF power transistors and MMICs, and our eighth generation LDMOS transistors (Gen8). Next-generation devices and improved products include GPS LNAs, medium power amplifiers, IF gain blocks, LO generators, satellite LNB ICs, and CATV modules.

Our portfolio for the wireless communication infrastructure has expanded, with a comprehensive set of best-in-class Doherty amplifier designs, a broad selection of amplifiers (medium power, variable gain, low noise), mixers, IQ modulators, and our JESD204A-compliant, high-speed DACs and ADCs.

"I'm proud to present the 15th edition of our RF Manual. It covers NXP's entire range of RF products and solutions in one comprehensive catalog, and I'm convinced that you'll find this version the most compelling and useful yet."

Kind regards,

John Croteau

Sr. Vice President & General Manager
Business Line High Performance RF

1. Products by application

1.1 Wireless communication infrastructure

1.1.1 Base stations (all cellular standards and frequencies)

See also brochure: 'Your partner in Mobile Communication Infrastructure design', document number 9397 750 16837.

Application diagram

The block diagram above shows base station transmit (upper part, Tx) and receive (lower part, Rx) functions, and includes the Tx feedback function (middle part, Tx feedback).

The signals generated in the "Digital Baseband & Control" block follow the air interface standard requirements. These signals are interfaced to the DAC via serial interface SER. The SER can use the LVDS or JEDEC standard. After the signals are fed to the I-DAC and Q-DAC, they are converted to the analog domain. Before the I and Q signals enter the IQ modulator, they are first low-pass filtered to remove any aliasing signals. At the IQ modulator, the signals are up-converted to RF using an LO signal coming from the PLL/VCO device, typically called the LO generator. Due to device aging and variation in cell load, the up-converted signals are fed to the VGA to control the power level. An additional band pass filter is needed to remove the out-of-band spurs. The clean signal is fed to the RF power board, where the desired transmit power is made. Finally, the RF power signal is fed to the antenna via a duplexer.

Directly after the final stage amplifier, a signal coupler picks up a certain amount of the RF signal, which is attenuated and then down-mixed using the IF Mixer. This signal is called the observation signal, and is used to derive coefficients for the digital pre-distortion algorithm. Since power levels vary, the observation is first fed to the VGA to control the power level, and after band pass filtering, the signal is converted to the digital domain using an ADC. The same serial interface is used to send the digital signals to the baseband processor.

At the receiver, the received signal directly after the duplexer is fed to the LNA for direct amplification, since the received signal level is quite low. If the first LNA is mounted in the tower top, a long RF cable is used to interface the RF signals with a base transceiver station (BTS). A second LNA is used to amplify the received signals. Band pass filtering is applied to reduce the out-of-band signals levels before these signals are applied to the IF mixer. Signal levels that change dramatically require a VGA to maintain the full scale ranges of the I-ADC and Q-ADC for optimal conversion performance. Low pass filtering is used before the ADC to remove the aliasing signals. These digital signals are interfaced to the baseband using a serial interface such as JEDEC.

The sample clocks and LO signals are derived from clock cleaners and PLLs respectively. This is denoted as Clock and PLL / VCO in the block diagram. This set-up is required to make a synchronized system. Typically denoted in SNRs, and in order to improve reception quality, the receive function is equipped with a second receiver, which is also called a diversity receiver.

Product highlight: BLF7G27L(S)-100/140

Utilising NXP's Gen7 LDMOS technology, this pair of transistors is designed to give leading performance in 2.7 GHz LTE applications. The BLF7G27L(S)-100 is designed to be the main amplifier, and the BLF7G27L(S)-140 the peak amplifier, in asymmetrical Doherty designs. This pair, along with others at different operational frequencies, are already firm industry favourites with many design wins around the world.

Features

- ▶ Asymmetrical Doherty efficiency 37.6% with 15.2 dB gain at 47.5 dB output power
- ▶ Capable of 26-32 V operation
- ▶ Extremely low thermal resistance
- ▶ Consistent device performance
- ▶ Unrivalled ruggedness

DAC1408D750 dual 14-bit DAC with JESD204A interface

Optimized for high-speed applications, such as 2.5/3/4G wireless, video broadcast, and instrumentation, this advanced 14-bit DAC has selectable interpolating filters and a four-lane CGV™ serial interface compliant with JEDEC JESD204A standard.

Features

- ▶ Dual-channel, 14-bit resolution
- ▶ 750 Msps maximum output rate
- ▶ Interpolation filters: 2x, 4x, 8x
- ▶ Four-lane JEDEC JESD204A serial digital input
- ▶ 32-bit programmable NCO frequency synthesizer with low-power option
- ▶ MDS (Multi-DAC Synchronization)
- ▶ SPI interface
- ▶ HVQFN64 package

NXP BTS Tx component demonstrator board

Product highlight:

BGA7350 MMIC variable gain amplifier

The BGA7350 MMIC is a dual independent digitally controlled IF variable gain amplifier (VGA) operating from 50 to 250 MHz. Each IF VGA amplifies with a gain range of 24 dB and, at its maximum gain setting, delivers 17 dBm output power at 1 dB gain compression and a superior linear performance. The BGA7350 is optimized for a differential gain error of less than ± 0.1 dB for accurate gain control and has a total integrated gain error of less than ± 0.4 dB. It is housed in a 32-pin leadless HVQFN package (5 x 5 mm).

Features

- ▶ Dual independent digitally controlled 24 dB gain range VGAs, with 5-bit control interface
- ▶ 50 to 250 MHz frequency operating range
- ▶ Gain step size: 1 dB \pm 0.1 dB
- ▶ 18.5 dB power gain
- ▶ Fast gain stage switching capability
- ▶ 17 dBm output power at 1 dB gain compression
- ▶ 5 V single supply operation with power-down control
- ▶ Logic-level shutdown control pin reduces supply current
- ▶ ESD protection at all pins
- ▶ Unconditionally stable

Product highlight:

BGX7221 MMIC dual down-mixer

The BGX7221 combines a pair of high performance, high linearity down-mixers for use in receivers that have a common local oscillator used with, for example, main and diversity paths. The device covers frequency bands from 1700 to 2700 MHz with an extremely flat behavior.

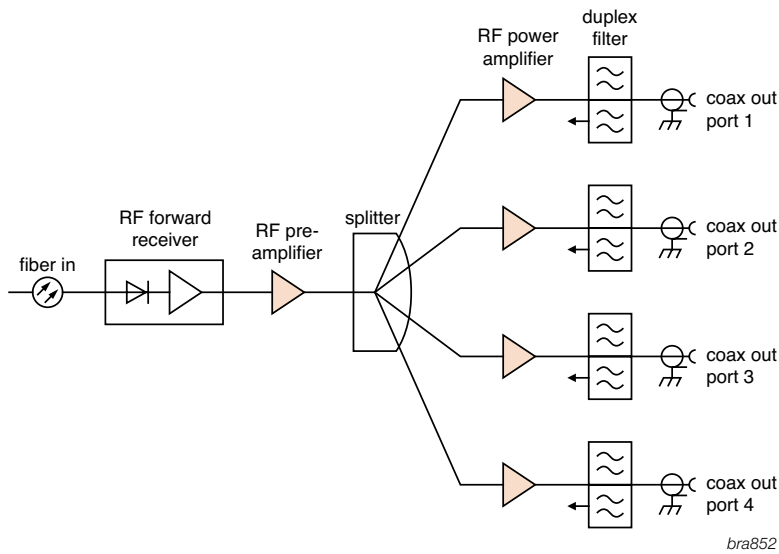

Features

- ▶ 8.5 dB conversion gain over all bands
- ▶ 13 dBm input, 1 dB compression point
- ▶ 25.5 dBm input third-order intercept point
- ▶ 10 dB (typ) small signal noise figure
- ▶ Integrated active biasing
- ▶ Single +5 V supply operation
- ▶ Power-down per mixer with hardware control pins
- ▶ Low bias current in power-down mode
- ▶ Matched 50 Ω single-ended RF and LO input impedances
- ▶ ESD protection at all pins

Product highlight: BGO807CE optical receiver

The BGO807CE is an integrated optical receiver module that provides high output levels and includes an integrated temperature-compensated circuitry. In your optical node design, BGO807CE enables a high performance/ price ratio and ruggedness. When upgrading an HFC network from analog to digital, our BGO807CE is the perfect fit.

Features

- ▶ Excellent linearity
- ▶ Low noise
- ▶ Excellent flatness
- ▶ Standard CATV outline
- ▶ Rugged construction
- ▶ Gold metallization ensures excellent reliability
- ▶ High optical input power range

Product highlight: CGD1046Hi

The CGD1046Hi with a high-output power level is primarily designed for use in fiber deep-optical-node applications (N+1/2/3). This 1 GHz hybrid amplifier solution offers an extended temperature range, high power overstress capabilities in case of surges, and high ESD levels resulting in a low cost of ownership. It's designed for durability and offering superior ruggedness.

Features

- ▶ High-output power
- ▶ High power gain for power doublers
- ▶ Extremely low noise
- ▶ Dark Green products
- ▶ GaAs HFET dies for high-end applications
- ▶ Rugged construction
- ▶ Superior levels of ESD protection
- ▶ Integrated ringwave protection
- ▶ Design optimized for digital channel loading
- ▶ Temperature compensated gain response
- ▶ Optimized heat management
- ▶ Excellent temperature resistance

1.3 TV and satellite

1.3.1 Network interface module (NIM) for TV reception

Application diagram

Recommended products

Function	Product	Package	Type	
RF Switch / PLT switch	MOSFET	5 V silicon RF switch	SOT23	BF1107

		3.3 V silicon RF switch	SOT143B	BF1118
			SOT143R	BF1118R
			SOT343	BF1118W
			SOT343R	BF1118WR

Function	Product	Package	Type	
AGC control amplifier	MOSFET	2-in-1 with band switch @ 5 V	SOT363	BF1215
		2-in-1 @ 5 V	SOT363	BF1216
		5 V	SOT343	BF1217

Note: given that there is now an LNA before the MOSFET, the gain of these MOSFETs is made slightly lower and the cross-modulation higher. That way, the MOSFET would not constantly be under AGC even under nominal RF input level.

Product highlight:

Save energy with BF11x8

The BF11x8 series are small signal, RF switching MOSFETs that can be used for switching RF signals up to 1 GHz. By using the BF11x8 series as an RF switch, you can save a considerable amount of energy. When a recording device (DVD-R, HDD-R, VCR, DVR) is powered off, viewers can still watch TV, although the antenna is looped via the recording device. Without the BF11x8, the antenna signal is lost.

When power to the recording device is on, the BF11x8 is open, so the RF signal travels via the recording device to the TV tuner. When power to the recording device is off, the BF11x8 closes. This ensures that the RF signal is looped through directly to the TV tuner and that TV reception is guaranteed. Energy is saved because the recording device can be powered off.

			SOT89	BFG540

[^] = This new series of LNA MMICs is designed specifically for high linearity (IP3O of 29 dBm), low noise applications like those in an active splitter or NIM tuner. Housed in a 6-pin SOT363 plastic SMD package, these MMICs are equipped with internal bias and matched to 75 Ω internally. For the VGAs, current consumption is < 5 mA during the bypass mode. Only two external components are needed, thus saving precious circuit board space.

Product highlight:

Make a high performance active splitter in a NIM tuner with BGU703x/ BGU704x

Today's TV tuners require complicated signal handling and benefit from flexibility in design. The front-end of a TV signal receiver is no longer just a tuned receiver, but has evolved into an RF Network Interface Module (NIM) with tuned demodulators, active splitters,

and remodulators. The active splitter requires an LNA with excellent linearity. NXP has developed two new series of LNA/VGA MMICs (BGU703x/BGU704x), designed especially for high linearity (P3O of 29 dBm) in low noise applications such as an active splitter in a NIM tuner. The BGU703x family operates at a supply voltage of 5 V and is intended for use with normal can tuners. The BGU704x family operates at 3.3 V and works seamlessly with our Si tuner ICs, which also operate at 3.3 V.

BF1206F dual gate MOSFET double amplifier

The device consists of two dual gate MOSFET amplifiers in a small SOT666 flat lead package. The BF1206F is a true low power device specified for low voltage and low currents, intended for use in mobile applications where power consumption is critical. Performance is suitable for application at supply voltages of 3 V and drain currents of 4 mA.

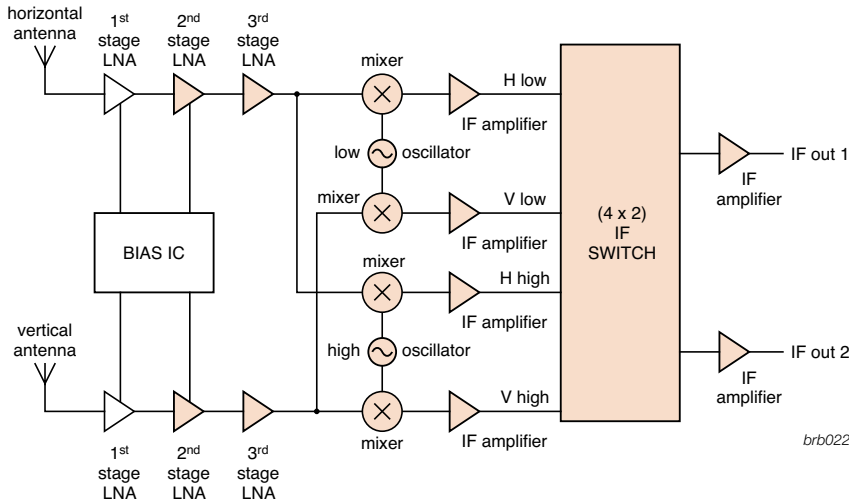

Features

- ▶ Low-power specified
- ▶ Two amplifiers in one small SOT666 package
- ▶ Shared gate 2 and source leads
- ▶ Each amplifier is biased by an external bias resistor
- ▶ Excellent noise and cross-modulation performance

Product highlight: BGA28xx-family of IF gain blocks

The BGA28xx IF gain blocks are silicon Monolithic Microwave Integrated Circuit (MMIC) wideband amplifiers with internal matching circuit in a 6-pin SOT363 plastic SMD package.

Features

- ▶ No output inductor necessary when used at the output stage
- ▶ Internally matched to 50 Ω
- ▶ Reverse isolation > 30 dB up to 2 GHz
- ▶ Good linearity with low second order and third order products
- ▶ Unconditionally stable ($K > 1$)

PIN diodes for switching matrix

In addition to delivering outstanding RF performance, this component simplifies design-in because of its extremely low forward resistance, diode capacitance, and series inductance. Significant board space is saved by supplying a range of highly compact package options – including SOD523, SOD323 and leadless SOD882D.

Features

- ▶ High isolation, low distortion, low insertion loss
- ▶ Low forward resistance (Rd) and diode capacitance (Cd)
- ▶ Ultra-small package options

TFF1003HN

The TFF1003HN is a Ku-band frequency generator intended for low phase noise Local Oscillator (LO) circuits for Ku-band VSAT transmitters and transceivers. The specified phase noise complies with IESS-308 from Intelsat.

Features

- ▶ Phase noise compliant with IESS-308 (Intelsat)
- ▶ LO generator with VCO range from 12.8 GHz to 13.05 GHz
- ▶ Input signal 50 MHz to 815 MHz
- ▶ Divider settings 16, 32, 64, 128 or 256

BGU7007 SiGe:C LNA MMIC for GPS, GLONASS, and Galileo

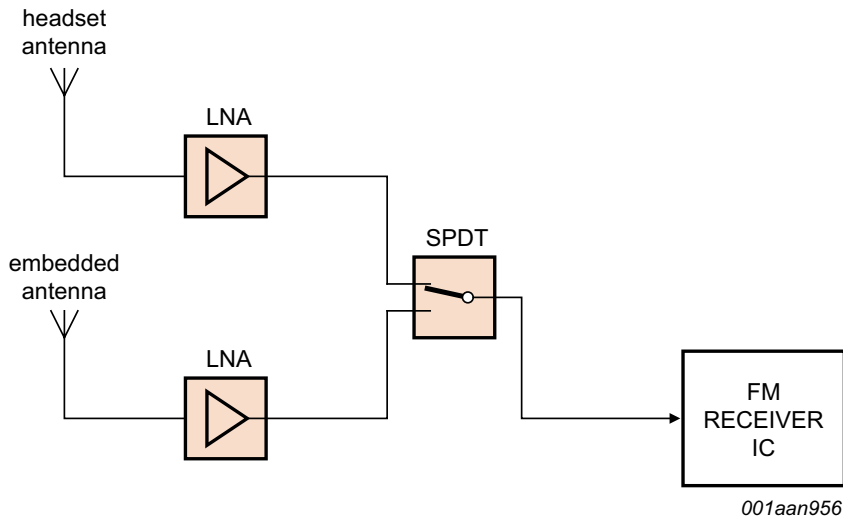

The BGU7007 is a low noise amplifier (LNA) for GNSS receiver applications in a plastic, leadless, 6-pin, extremely-small SOT886 package. It requires only one external matching inductor and one external decoupling capacitor.

Features

- ▶ Covers full GNSS L1 band, from 1559 to 1610 MHz
- ▶ Noise figure (NF) = 0.85 dB
- ▶ Gain = 18.5 dB
- ▶ High 1 dB compression point of -12 dBm
- ▶ High out-of-band IP3i of 4 dBm
- ▶ Supply voltage 1.5 to 2.85 V
- ▶ Power-down mode current consumption < 1 μ A
- ▶ Optimized performance at low supply current of 4.8 mA
- ▶ Integrated temperature stabilized bias for easy design
- ▶ Requires only one input matching inductor and one supply decoupling capacitor

BGU7003W MMIC wide band amplifier

The BGU7003W is a wideband amplifier in SiGe:C technology for high-speed, low noise applications. It is housed in a plastic, leadless, 6-pin, extremely-thin, small-outline SOT886 package.

Features

- ▶ Applicable between 40 MHz and 6 GHz
- ▶ High ohmic FM LNA: 13 dB gain and 1.1 dB NF at 100 MHz
- ▶ 50 Ω FM LNA: 15 dB gain and 1.4 dB NF at 100 MHz
- ▶ Integrated temperature-stabilized bias for easy design
- ▶ Bias current configurable with external resistor
- ▶ Power-down mode current consumption < 1 μA
- ▶ ESD protection > 1 kV Human Body Model (HBM) on all pins

BGU7003 MMIC wideband amplifier

Manufactured in NXP's latest SiGe:C process, this high frequency RF MMIC delivers high-quality reception with extended battery life. It is a cost-effective, silicon-based alternative to GaAs devices, and offers higher integration and easier design-in than discrete bipolar transistors.

Features

- ▶ Low noise, high-gain microwave MMIC
- ▶ Maximum stable gain = 19 dB at 1.575 GHz
- ▶ 110 GHz f_T -silicon germanium technology
- ▶ Optimized performance at low (5 mA) supply current
- ▶ Extremely thin, leadless 6-pin SOT891 package
- ▶ Integrated biasing and shutdown for easy integration

Product highlight:

Varicap diodes as VCO

Varicap diodes are principally used as voltage varicap capacitors, with their diode function a secondary option. These devices are ideal for voltage controlled oscillators (VCOs) in ISM band applications.

Features

- ▶ Excellent linearity
- ▶ Excellent matching
- ▶ Very low series resistance
- ▶ High capacitance ratio

Note 1:

These recommended discrete products are applicable for NICEPACS, CCC and DDICE: NICE:TEA6840H,TEA6845H,TEA6846H, NICEPACS:TEA6848H,TEA6849H; CCC:TEF6901H,TEF6903H; DDICE:TEA6721HL. All recommended discrete products are applicable, excluding AM LNA in: DICE2:TEF6730HWCE.

Note 2:

Phone and portable radio (IC:TEA5767/68) use varicap BB202 as FM oscillator.

Product highlight: BF862 junction field effect transistor

Our tuning portfolio contains excellent products for car radio reception applications and in-vehicle media platforms. The NXP devices for this application ensure excellent reception quality and ease of design-in. Performance is demonstrated in reference designs.

The high performance junction FET BF862 is specially designed for AM radio amplifiers.

Features

- ▶ High transition frequency and optimized input capacitance for excellent sensitivity
- ▶ High transfer admittance resulting in high gain
- ▶ Encapsulated in the versatile and easy to use SOT23 package

Product highlight:

BLF888A LDMOS power transistor

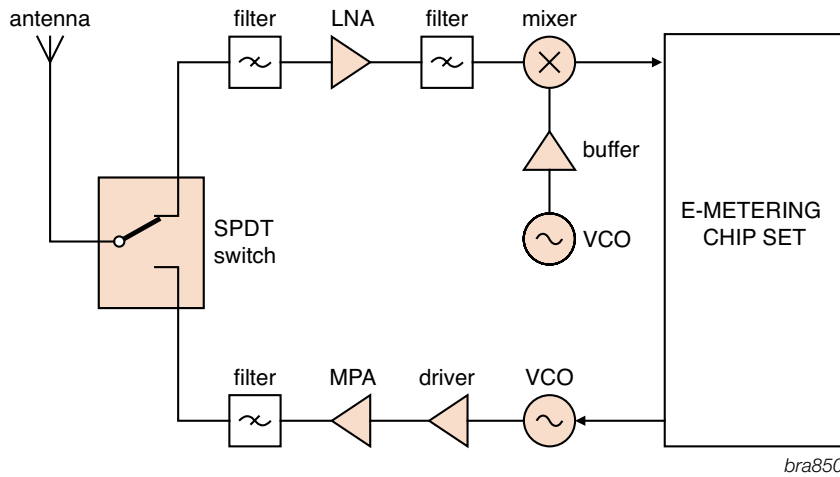

NXP's 50 V high voltage LDMOS process enables highest power and unequalled ruggedness. The BLF888A (VSWR > 50:1) delivers the highest power level for digital broadcasting available to date.

Features

- ▶ Best broadband efficiency
- ▶ Highest power devices
- ▶ Unrivalled ruggedness
- ▶ Low-thermal resistance design for reliable operation
- ▶ Consistent device performance

Product highlight:

New family for ISM 2.45 GHz

NXP's 6th and 7th generation LDMOS technology, along with advanced packaging concepts, enables power amplifiers that deliver best-in-class performance at 2.45 GHz. The unsurpassed ruggedness and low thermal resistance, along with the intrinsic efficiency of the LDMOS process, make these transistors ideally suited for the furnace application.

Features

- ▶ Excellent ruggedness
- ▶ Consistent device performance
- ▶ Low thermal resistance design for unrivalled reliability
- ▶ Ease of design

Product highlight:

LDMOS in emerging medical applications

NXP's line of 50 V high voltage LDMOS devices enables highest power output and features unequalled ruggedness for pulsed operation in MRI and NMR applications. The high power densities enable compact amplifier design.

Features

- ▶ Best broadband efficiency
- ▶ Highest power (density) devices
- ▶ Unrivalled ruggedness
- ▶ Consistent device performance

1.7 Aerospace and defense

1.7.1 Microwave products for avionics, L- and S-band radar applications

Product highlight: NXP launches high quality pallets for S-band

The BLS6G2933P-200 is the first LDMOS-based, industry-standard pallet available on the market. This pallet offers more than 40% efficiency, includes the complete bias network and can be used as direct replacement for current solutions.

Features

- ▶ $P_1\text{ dB} > 200\text{ W}$
- ▶ Efficiency $> 40\%$
- ▶ Industry-standard footprint
- ▶ $50\ \Omega$ in/out matched for entire bandwidth
- ▶ Lightweight heat sink included

2. Focus applications, products & technologies

2.1 Wireless communication infrastructure

2.1.1 VGAs with superior linearity for enhanced system performance

NXP variable gain amplifiers BGA7202/4, BGA7350/1

Manufactured in NXP's innovative QUBiC4 process, these VGAs deliver more on-chip functionality in less space, and meet the most demanding requirements for system performance.

Key features

- ▶ BGA720x: transmit VGAs
 - Frequency band: 700 to 2200 or 2750 MHz
 - Gain range: 23 or 31.5 dB
 - OIP3: +36 dBm/110 mA (BGA7202), +41 dBm/520 mA (BGA7204) @ minimum attenuation
- ▶ BGA735x: dual receive IF VGAs
 - Frequency band: 50 to 250 MHz
 - Gain range: 24 or 28 dB
 - OIP3: +44 dBm/245 mA or higher @ minimum attenuation
 - Gain flatness: 0.1 dB
 - Differential phase error: 0.1 degrees
- ▶ Best-in-class linearity (OIP3) at low power consumption
- ▶ ESD protection > 2 kV HBM and > 1.5 kV CDM on all pins
- ▶ HVQFN32 leadless packages (5 x 5 mm)

Key applications

- ▶ Wireless infrastructure base stations
- ▶ Multi-carrier systems

These high performance variable gain amplifiers (VGAs) support multiple frequency bands and the latest air interfaces. They offer best-in-class linearity, very low power consumption, high immunity to out-of-band signals, spurious performance, and output power. They are ideally suited for GSM, W-CDMA, WiMAX, LTE base-station infrastructure, and multi-carrier systems.

The BGA7202 and BGA7204 are RF VGAs used in the transmit path. The BGA7202 offers an output third-order intercept (OIP3) of +45 dBm and 27 dB of attenuation. The attenuation is controlled by means of an analog interface.

The BGA7204 provides an OIP3 of +37 dBm and 32 dB of attenuation. The attenuation is controlled by means of a digital interface. In addition, the gain curve of the BGA7204 can be programmed via an SPI interface.

The BGA7350 and BGA7351 are dual, independently controlled receive IF VGAs that operate from 50 to 250 MHz. Integrated matching improves performance in the receiver chain, because the VGA can drive the filter directly into the analog-to-digital converter to ensure a constant input level.

The BGA7350 has a gain range of 24 dB, while the BGA7351 has a range of 28 dB. For both devices, the maximum gain setting delivers 18 dBm output power at 1 dB gain compression (P1dB), with superior linear performance and overdrive performance up to +20 dBm. For gain control, each amplifier uses a separate digital gain-control code, which is provided externally through two sets of five bits. The resulting gain flatness is 0.1 dB.

Other features

All four devices are RoHS-compatible and available in space-saving HVQFN32 leadless packages that measure just 5 x 5 mm. They are unconditionally stable devices that offer ESD protection at all pins and meet moisture sensitivity level 1.

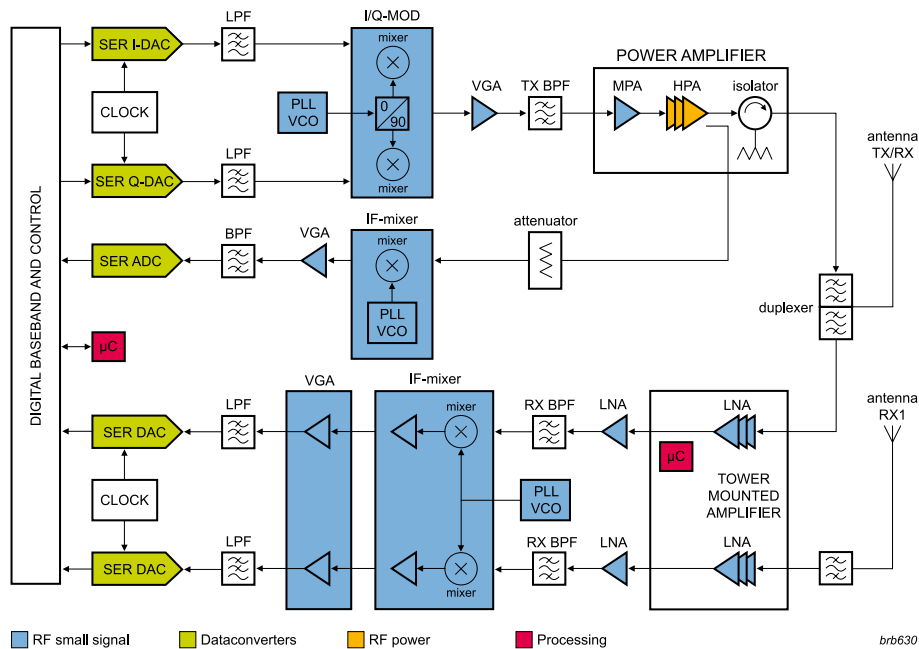

State-of-the-art QUBiC4

NXP's industry-leading QUBiC4 technology, available since 2002, has been widely deployed in the field and offers more consistent parameter performance compared to GaAs technology. It speeds the migration from GaAs to silicon and delivers more functionality in less space. High integration reduces the design footprint and enables more cost competitive designs. It also improves reliability and offers significant savings in manufacturing expenditures.

Complete signal chain

NXP is one of the very few companies that supplies products for the complete signal chain – from analog mixed-signal components such as ADCs and DACs to RF small signal devices and high-power RF amplifiers. This system-level approach allows engineers to purchase products that work well together as part of the overall system design, and makes it easier for designers to optimize performance in today's wireless infrastructure.

Furthermore, since NXP has in-house access to all the core IP, the company is positioned to support even higher levels of integration in the future.

2.1.2 Doherty amplifier technology for state-of-the-art wireless infrastructure

Best-in-class PA designs enable considerable energy savings

NXP's latest power amplifier designs let the wireless infrastructure run with significantly higher energy efficiency – towards “Green Base Stations”. In order to achieve the highest efficiencies currently possible, NXP combines its latest generations of LDMOS technology (Gen7 & 8) with the Doherty concept. The high performance of our LDMOS technology, matched with the efficiency of the Doherty technology, creates power amplifiers that offer high efficiency, high gain, are easily linearizable, and are more cost-effective to operate.

Developed by W.H. Doherty in 1936, the Doherty amplifier remained largely unused because the dominant mobile communication system modulation techniques (FM, GMSK, and EDGE) did not require high peak-to-average ratio (PAR) signals. For today's base stations, however, transmitting 3G, 4G, and multi-carrier signals makes the high power and added efficiency of the Doherty approach the preferred option for most service providers.

NXP's Doherty designs ensure high efficiency while maintaining a very similar peak power capability of two transistors combined. The input and output sections are internally matched, benefiting the amplifiers with high gain, good gain flatness, and phase linearity over a wide frequency band.

Integrated Doherty

NXP can even offer the world's first fully integrated Doherty designs. From the outside these devices look like ordinary transistors. In fact, they are completely integrated Doherty amplifiers that readily deliver the associated high efficiency levels for base station applications. With the ease of design-in of an ordinary Class AB transistor, they also provide significant space and cost savings.

Key features & benefits

- ▶ Contains splitter, main and peak amplifier, delay lines, and combiner in one package
 - 40% efficiency @ 10 W average power
 - no additional tuning in manufacturing
- ▶ Design is as easy as with a single Class AB transistor
- ▶ Ideally suited for space-constrained applications (e.g. remote radio heads, antenna arrays)
- ▶ Currently available for TD-SCDMA (BLD6G21L(S)-50) and W-CDMA (BLD22L(S)-50); see chapter 3.7.1.4 for details

Discrete Doherty amplifiers

In addition to the integrated versions, NXP offers product demonstrators for very efficient, high-power, discrete two- and three-way Doherty amplifiers. The two-way designs, based on the BLF7G22LS-130 device, deliver 47.0 dBm (50 W) with 43% efficiency and 15.7 dB gain for W-CDMA applications.

Our flagship three-way Doherty demonstrator even achieves 48% efficiency at 48 dBm (63 W) average output power and 15.0 dB gain with a two-carrier W-CDMA signal. The current design covers the W-CDMA standard for band 1 operation and is tailored towards high-yield, minimum-tuning, volume manufacturing.

Key features & benefits

- ▶ Most efficient Doherty amplifier designs available to date
- ▶ Production-proven, consistent designs
- ▶ NXP's LDMOS provides unsurpassed ruggedness
- ▶ Currently available for the following frequency bands:
 - 728 to 821 MHz
 - 869 to 960 MHz
 - 1805 to 1880 MHz (DCS)
 - 1930 to 1990 MHz (PCS)
 - 1880 to 2025 MHz (TD-SCDMA)
 - 2110 to 2170 MHz (UMTS / LTE)
 - 2300 to 2400 MHz (WiBRO / LTE)
 - 2500 to 2700 MHz (WiMAX / LTE)
 - 3300 to 3800 MHz (WiMAX)

All of our product demonstrators are supported by comprehensive documentation and hardware. Please see chapter 3.7.1.7 for a complete list of available designs.

2.1.3 The new generation of LDMOS RF power for wireless infrastructures: NXP's Gen8

NXP recently announced the 8th generation of its renowned RF power device portfolio for base stations. Listening carefully to the world's leading infrastructure providers and understanding their requirements, a holistic approach was taken during the development of Gen8. This basically means that we scrutinized every little detail of a power transistor and reconsidered the entire "transistor system" to come up with a new generation, which performs markedly better than its predecessors and again sets standards for the industry.

Gen8 clearly addresses the key trends in the wireless infrastructure industry

- ▶ Increasing signal bandwidths up to 100 MHz
- ▶ Cost sensitivity
- ▶ Reduction in the size/weight/volume of the cabinet
- ▶ Continuous need for greater electrical efficiency to reduce cooling requirements and operational expenditure
- ▶ Ever increasing output power to unprecedented levels
- ▶ Need to deploy multi-standard and future-proof solutions

Gen8 is the answer to all these often conflicting requirements. The package and die design, as well as input and output match structures, have been optimized to enable wideband, affordable, compact, multi-standard and highly efficient Doherty power amplifiers.

The first wave of Gen8 transistors is deployed for applications up to 960 MHz with excellent linearization capabilities, state-of-the-art ruggedness and efficiencies in excess of 55% for multicarrier GSM PAs. The second wave of products covers WCDMA-LTE applications at 2.1 GHz. Solutions for all other cellular frequency bands are currently being developed.

The first wave of Gen8 transistors

2.2 Broadband communication infrastructure

2.2.1 Connecting people, protecting your network: NXP's CATV C-family for the Chinese SARFT standard

Specially designed for the Chinese Hybrid Fiber Coax (HFC) infrastructure, NXP's CATV C-family offers you a total solution for cable TV networks. It is both flexible enough for connecting rural communities as part of China's "Connecting every village" program and powerful enough for upgrading major cities from analog to high-end digital services. All C-type devices are compliant with the Chinese State Administration for Radio, Film and Television (SARFT) standard, and cover most HFC applications in the 550 MHz to 1 GHz range.

Products

- ▶ BGY588C, BGE788C and CGY888C push-pull amplifiers
- ▶ BGD712C, CGD944C, CGD942C, CGD982HCi, CGD985HCi and CGD987HCi power doublers
- ▶ BGO807C, BGO807CE optical receivers

Benefits

- ▶ Compliant with Chinese SARFT HFC networks standard
- ▶ Transparent cap allows confirmation of product authenticity
- ▶ Rugged construction
- ▶ Highest by Design internal ESD protection

Features

- ▶ Excellent linearity, stability and reliability
- ▶ High power gain
- ▶ Extremely low noise
- ▶ Silicon nitride passivity
- ▶ GaAs HFET dies for high end devices

Further extending our high quality CATV portfolio, this new family lets you address an even wider range of HFC applications. Dedicated solutions for the implementation of CATV systems in China, our C-type devices deliver the performance you need for modern TV infrastructures.

The BGY588C, BGE788C and BGD712C devices cover the frequency range from 550 MHz to 750 MHz. Extending the C-family portfolio into the high-end segment, the CGD944C, CGD942C, CGY888C and BGO807C operate between 40 MHz and 870 MHz and have been specifically tested under Chinese raster conditions. Manufactured using our GaAs HFET die process, the CGD942C and CGD944C are high-gain, high-performance 870 MHz power doublers. The CGD982HCi, CGD985HCi and CGD987HCi operate from 40 MHz to 1003 MHz and are specified for 870 MHz and 1 GHz. These power doublers are optimized for the Chinese SARFT standard. They are capable of satisfying the demanding requirements of top-end applications including high-power optical nodes.

Our GaAs HFET MMIC dies are providing by design the best ESD protection levels with no needs for the external TVS components normally used with GaAs pHEMT devices.

All CATV C-type devices feature a transparent cap that makes it easy to distinguish them from counterfeit products.

C-family application information

NXP C-family by application

Ordinary optical receiver				•	•	•	•
Distribution amplifier			•	•		•	•
Line extender amplifier			•	•		•	•
Terminating amplifier	•	•	•				

BGY588C, BGE788C and CGY888C

The last stage of an HFC network structure is called a 'terminating amplifier' or 'user amplifier' as it is close to the subscribers. Each terminating amplifier requires a single module such as BGY588C for 550 MHz, BGE788C for 750 MHz and CGY888C for 870 MHz systems. These modules are fitting perfectly in the Chinese "Connecting to Every Village" projects.

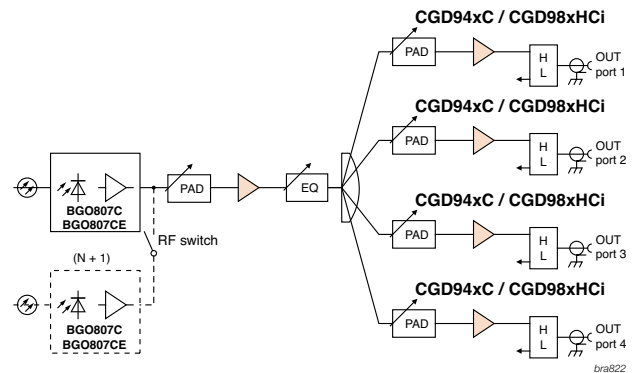

BGD712C

The BGD712C is a 750 MHz, 18 dB power doubler module. It has been designed for 750 MHz optical nodes including ordinary or optical receivers and distribution amplifiers. It can also be used in line extender amplifiers together with a 750 MHz push-pull module, such as BGY785A or BGY787. As such it can be used widely in Chinese "Connecting to Every Village" projects.

CGD944C and CGD942C

Our full GaAs power doublers modules, CGD942C and CGD944C offer high output power and better CTB and CSO than other modules. Designed for high-end HFC networks containing optical nodes with multiple out-ports, these modules enable each port to directly cover at least 125 subscribers. These two devices are ideal when used in upgrading HFC networks to 870 MHz.

CGD982HCi, CGD985HCi and CGD987HCi

Our newest GaAs power doubler modules, CGD982HCi, CGD985HCi and CGD987HCi are customized designs for CATV hybrid fiber coax Chinese networks operating in the 40 MHz to 1003 MHz bandwidth, and specified with the Chinese cable TV network official loading raster on top of the NTSC loading traditional rasters. For use in optical nodes for fiber deep applications where the output power level needs to be at its highest.

BGO807C

The BGO807C is an integrated optical receiver module that provides high output levels and includes an integrated temperature compensated circuitry. In your optical node design, BGO807C enables a high performance / price ratio and ruggedness. When upgrading an HFC network from analog to digital, our BGO807C is the perfect fit.

2.2.2 Highly efficient line-up of 1 GHz GaAs modules for sustainable CATV networks

NXP high gain power doublers CGD104xHi and push-pulls CGY104x

Designed for 1 GHz “sustainable networks,” these high performance GaAs devices enable extended bandwidth and higher data rates. They deliver increased network capacity and make way for high-end services like HDTV, VoIP, and digital simulcasting.

New CATV GaAs platform lay-out

Key features

- ▶ Excellent linearity, stability, and reliability
- ▶ High power gain for power doublers
- ▶ Extremely low noise
- ▶ Dark Green products
- ▶ GaAs HFET dies for high-end applications
- ▶ Rugged construction
- ▶ Superior levels of ESD protection
- ▶ Integrated ringwave protection
- ▶ Design optimized for digital channel loading
- ▶ Temperature compensated gain response
- ▶ Optimized heat management
- ▶ Excellent temperature resistance

Key benefits

- ▶ Simple upgrade to 1-GHz capable networks
- ▶ Low total cost of ownership
- ▶ High power-stress capability
- ▶ Highly automated assembly

Key applications

- ▶ Hybrid Fiber Coax (HFC) applications
- ▶ Line extenders
- ▶ Trunk amplifiers
- ▶ Fiber deep-optical-node (N+0/1/2)
- ▶ Bridgers

The NXP power doublers CGD104xH and CGD104xHi are ideal for use in line extenders and trunk amplifiers. They support fiber deep-optical-node applications (N+0/1/2), delivering the highest output power on the market today. The GaAs HFET die process delivers high gain, excellent CTB and CSO ratings, along with lower current.

The new NXP CGY1047x push-pull family is the first line-up on the market combining very low noise, best-in-class distortion parameters, and low, “carbon footprint” capabilities. It delivers the best performance for the lowest power consumption, so it reduces OPEX and CO₂ emissions

All of NXP’s 1 GHz solutions are designed for durability and offer superior ruggedness, an extended temperature range, high power overstress capabilities, and extremely high ESD levels. As a result, they also reduce the cost of ownership.

The GaAs die is inserted in an HVQFN package that is then mounted on thermal vias that manage heat transfer to the heat sink. Temperature-control circuitry keeps the modules high performance stable over a wide range of temperature. Assembly is fully automated and requires almost no human intervention, so repeatability remains very high.

Upcoming products

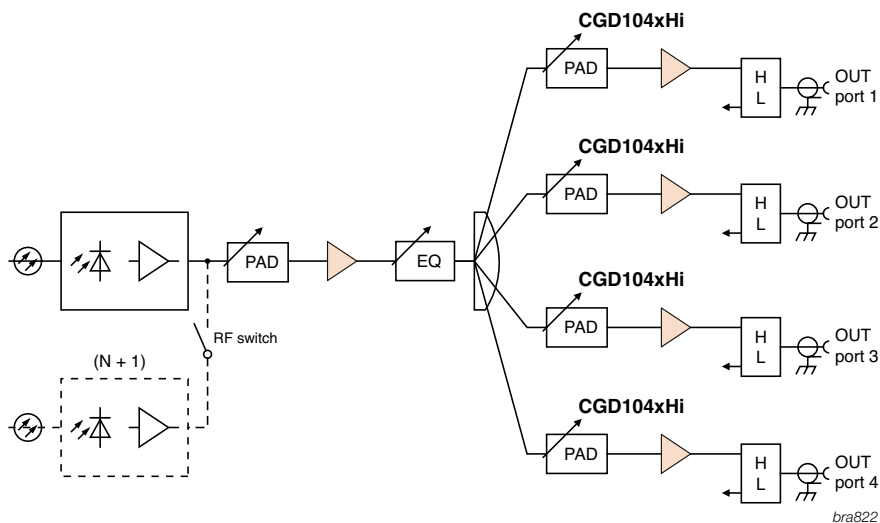

Additional push-pulls, currently under development, will extend the capabilities of the power doublers even further, supporting almost all modern HFC applications. The push-pull CGY1041 will deliver a gain of 21 dB, the CGY1043 a gain of 23 dB, the CGY1049 a gain of 29 dB and the CGY1032 a gain of

32 dB. NXP is also developing a new, highly integrated power doubler. The CGD1046Hi will deliver, in one IC, a 26 dB power gain with 60 dBmV output power and excellent ESD protection, for the ultimate in high quality, distortionless devices.

2.3 TV and satellite

2.3.1 LNAs for TV/STB tuners with programmable gain

NXP LNAs for STBs BGU703x for 5 V and BGU704x for 3.3 V supply voltage

This family of 5 V and 3.3 V wideband, low noise amplifiers is specifically designed for high linearity, low noise performance for TV, DVR/PVR, set-top box tuner applications from 40 MHz to 1 GHz. The unique programmable gain compensates for tuner switch signal loss, which is becoming more important following the trend of more tuners in one system, and improves overall system performance with 7-10 dB.

Key features

- ▶ Equipped with internal bias
- ▶ Programmable gain and bypass modes
- ▶ Flat gain between 40 MHz and 1 GHz
- ▶ Noise figure = 4 dB
- ▶ High linearity: IP3O = 29 dBm
- ▶ 75 Ω input and output impedance
- ▶ Power-down during bypass mode (current consumption < 5 mA)
- ▶ ESD protection > 2 kV human body model (HBM) on all pins

Key applications

- ▶ Terrestrial and cable STBs
- ▶ Silicon and can tuners
- ▶ Personal and digital video recorders (PVRs, DVRs)
- ▶ Home networking and in-house signal distribution
- ▶ FM radios
- ▶ Antenna amplifiers

In set-top boxes that use multiple or network-interfaced module (NIM) tuners, the RF signal usually needs to be distributed or split. Very often, a low noise amplifier (LNA) is used to compensate for signal loss when the signal is split with a balun core.

The NXP BGU703x/BGU704x are LNA MMICs produced in an SiGe:C process. All five products in the series are matched to 75 Ω at both the input and the output, for easier use. The BGU703x are suitable for supply voltages of 5 Volts and the BGU704x for 3.3 Volts. The BGU7031 and BGU7041 are LNAs with fixed gain. The BGU7032 and BGU7042 have an additional bypass mode. The BGU7033 has two gain levels ($G_p = 10$ dB or 5 dB) and the bypass mode.

All five devices are designed for high linearity and low noise over a frequency range of 40 MHz to 1 GHz. They can be used in conventional can tuners or with silicon tuner ICs. Compared to GaAs solutions, they are less susceptible to ESD and offer a cost savings of more than 50 percent.

Integrated biasing and switching functions reduce the number of external components from roughly 17 to just two or three. By comparison, a discrete LNA design would typically require six to nine external components and, to realize the bypass function, would need an extra four pin diodes and at least eight additional passive components.

Each MMIC in the BGU703x/BGU704x are housed in a 6-pin SOT363 (SMD) package. Each offers a flat gain between 40 MHz and 1 GHz, so there's no gain fluctuation over the typical frequency range. The low noise figure of 4 dB reduces overall tuner noise, and the high linearity (IP3O = 29 dBm) minimizes distortion. The input and output impedance is adapted to the application (75 Ω), so there's no need for external matching.

To save power, the ICs can be powered-down during bypass mode, for a total current consumption of less than 5 mA. Also, to protect the LNA from external electrical discharge in its function as the tuner input, every pin is equipped with ESD protection of >2 kV human body model (HBM).

LNAs for set-up boxes (75 Ω)

Block diagram of active splitter with passive loop-through

2.3.2 Complete satellite portfolio for all LNB architectures

NXP Satellite LNB devices TFF101xHN, BFU710F/730F, and BGA28xx

Designed for use in LNAs, mixers, and IF amplifiers, these robust, small-footprint products are the latest additions to NXP's leading portfolio for satellite LNB architectures. They are manufactured in NXP's groundbreaking QUBiC4X SiGe:C and QUBiC4+ process technology.

Fully integrated Ku-band downconverters TFF101xHN

The TFF101xHN is a family of fully integrated downconverters for Ku-band LNBs. They give the best RF performance in terms of phase noise, gain, and noise figure at the lowest current consumption in the market.

Ku-band downconverter TFF101xHN/N1 for LNB

- ▶ Typical application: Universal Single LNB & Twin LNB
- ▶ Ultra-low current consumption: 54 mA over PVT
- ▶ Only 7 external components
- ▶ No inductors
- ▶ Single supply domain: 5 V
- ▶ Uses low-cost fundamental 25 MHz crystal
- ▶ High PL1dB_o = 3 dBm / 3OIP_o = 13 dBm
- ▶ Best-in-class PN < 1.8 deg RMS
 - 10 kHz to 13 MHz integration bandwidth
- ▶ Multiple gain types available
 - TFF1014HN/N1 36 dB
 - TFF1015HN/N1 39 dB
 - TFF1017HN/N1 42 dB
 - TFF1018HN/N1 45 dB
- ▶ Flat gain over frequency (< 2 dBpp)
- ▶ Input & output matched 50 Ω
- ▶ Small leadless DHVQFN16 package (2.5 x 3.5 x 0.85 mm)

RF transistors BFU710F/730F

The BFU710F and BFU730F are wideband RF transistors that can be used as an LNA or as a mixer for a DBS LNB in the Ku-band. In either application, they deliver good noise and linearity, a higher gain at a lower current consumption compared to their GaAs pHEMT equivalents, and the cost advantage of silicon.

BFU710F as LNA in Ku-band LNB

- ▶ Typical application: LNA2 for single output LNB
- ▶ Overall similar RF performance to GaAs pHEMT LNAs
- ▶ Power consumption: 3.5 mA
- ▶ Single supply: 3/5/6 V
- ▶ High RF gain: 13.5 dB
- ▶ Low noise figure: 1.6 dB
- ▶ Linearity (OIP3): 12 dBm

BFU710F as mixer in Ku-band LNB

- ▶ Typical application: Active mixer for single output LNB
- ▶ Single supply 3/5/6 V
- ▶ Low power consumption: 2.5 mA
- ▶ LO drive < 0 dBm
- ▶ SSB noise figure < 8 dB (including BPF at the input)
- ▶ SSB conversion gain > 5 dB (including BPF at the input)
- ▶ Linearity (OIP3) > 0 dBm
- ▶ LO-RF isolation min 20 dB
- ▶ RF match better than 10 dB
- ▶ IF match better than 8 dB

BFU730F as LNA in Ku-band LNB

- ▶ Typical application: LNA2 and LNA3 for multiple output LNB
- ▶ Overall similar RF performance to GaAs pHEMT LNAs
- ▶ Power consumption: 11 mA
- ▶ Single supply 3/5/6 V
- ▶ Very high RF gain: 11.5 dB
- ▶ Low noise figure: 1.25 dB
- ▶ Linearity (OIP3) > 17 dBm
- ▶ Return loss > 10 dB

MMICs BGA28xx as IF amplifiers (1st stage & output stage)

For compatibility with existing designs, the series uses market standard packages: the SOT363 and the pin-compliant SOT363F. The pinning is identical to NXP's current gain block family, and the blocks deliver similar noise figures. New features include flatter gain, a positive gain slope, improved P1dB vs I_{cc}, and no necessity for an output inductor.

- ▶ Internally matched at 50 Ω
- ▶ Gain slope > 0.5 dB
- ▶ Single supply voltage: 3.3 or 5 V

- ▶ Reverse isolation: > 30 dB up to 2 GHz
- ▶ Best-in-class power vs current consumption
- ▶ Noise figure: 4 to 6 dB at 1 GHz
- ▶ Unconditionally stable ($K > 1$)
- ▶ High-compression-point models work without output inductor
- ▶ 6-pin SOT363 plastic SMD package

These products – the integrated downconverters TFF101xHN, the wideband transistors BFU710F/730F for LNA and mixer functionality, and the BGA28xx series of IF MMICs – are the most recent additions to NXP's leading portfolio for

satellite LNB. They join the other discrete products, including oscillators, amplifiers, and switches, to provide complete coverage for all LNB architectures.

Since the ICs, transistors, and the MMICs are manufactured in NXP's industry-leading QUBiC4X SiGe:C and QUBiC4+ process, they offer better overall RF performance and are more robust than their GaAs equivalents with the cost advantage of silicon. The process technology also enables higher integration, for added features. NXP owns the industrial base for production (wafer fab, test, assembly), so volume supplies can be assured.

Satellite outdoor unit, LNB for multiple users

NOTE: Also look at chapter 1.4.4 satellite outdoor unit.

Fully integrated mixer/oscillator/downconverter

2.3.3 VSAT, 2-way communication via satellite

Design a Ku-/ Ka-band VSAT transceiver that meets IESS-308 with NXP's Ku-/ Ka-band RF LO generators

The TFF100xHN family are Ku-band RF PLLs, with integrated VCO intended for low phase-noise local-oscillator (LO) circuits in Ku- & Ka-band VSAT transmitters and transceivers. Manufactured in a high performance SiGe:C process, these devices deliver extremely low phase noise and comply with the IESS-308 from Intelsat.

Features

- ▶ Phase noise compliant with IESS-308 (Intelsat)
- ▶ Differential input and output
- ▶ Divider settings at 16, 32, 64, 128 or 256
- ▶ Lock-detect output
- ▶ SiGe:C technology (120 GHz f_T process)
- ▶ HVQFN24 (SOT616-1) package

Applications

- ▶ VSAT block upconverters
- ▶ VSAT down conversion
- ▶ Local oscillator signal generation

VSAT networks are commonly used to transmit narrowband data, such as point-of-sale transactions for credit cards, or to transmit broadband data that supports satellite Internet access to a remote location, VoIP, or video.

The network typically consists of a dish antenna, an outdoor unit, and an indoor unit. The outdoor unit is used for frequency translation between RF and IF, and usually includes a microwave-based uplink/downlink separator, a low noise block (LNB) for receiving the downlink signals, and a block Upconverter (BUC).

The VSAT ICs can be used to create the LO generator for a linear BUC (meaning the IF or RF conversion is done by mixing with an LO).

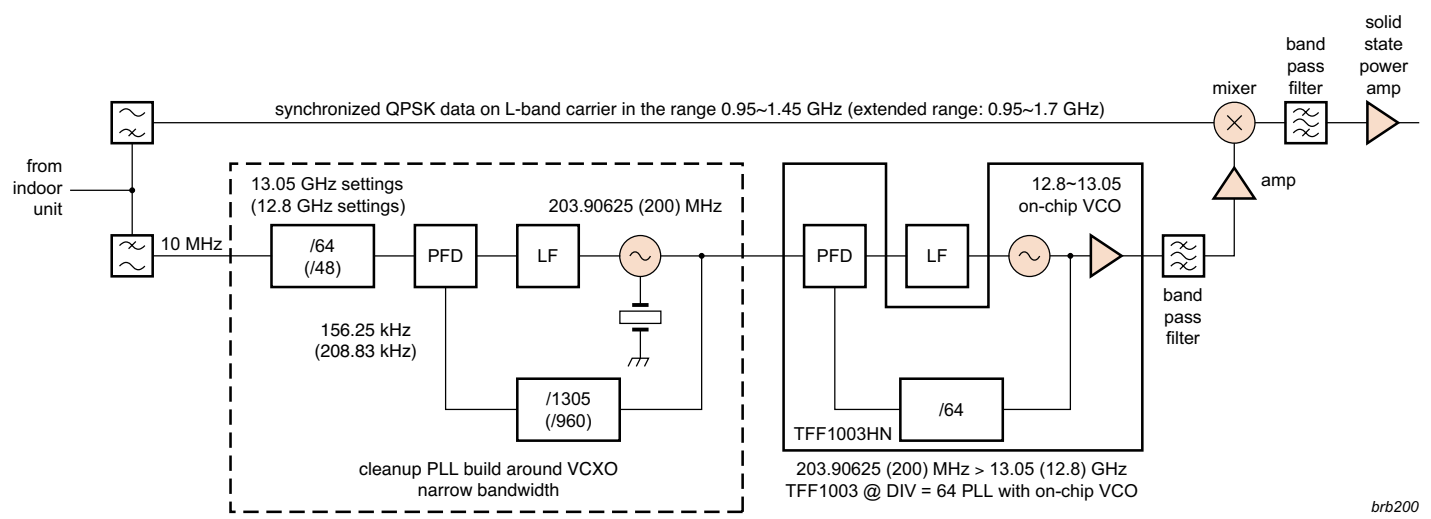

To enable precise frequency and time multiplexing, the downlink signal provides an accurate frequency reference of 10 MHz. The indoor unit frequency multiplexes this with the uplink IF signal, and the LO signal in the BUC needs to be frequency-locked to the reference.

The TFF100xHN ICs are housed in a 24-pin HVQFN (SOT616-1) package. The pins have been assigned for optimal performance. Three voltage domains are used to separate the block on the IC, and two pins for each output (OUT-P and OUT-N) have been reserved to match a typical layout using a linewidth of $Z = 50 \Omega$ microstrip on a 20-mil RO4003 board (1.1 mm).

The ground pins have been placed next to the reference input and the output, and, to minimize crossings in the application, all the supply pins are on the same side of the IC.

Typical VSAT network

brb200

2.3.4 Low noise LO generators for microwave & mmWave radios

NXP LO generators (integrated VCO/PLL) TFF11xxxHN

Manufactured in NXP's breakthrough QUBiC4X SiGe:C process technology, these highly integrated, alignment-free LO generators are low-power and low-spurious solutions that simplify design-in and lower the total cost of ownership.

Features

- ▶ TFF11xxxHN family: lowest-noise LO generators for a full family in 7 to 15 GHz range
- ▶ Maximum power consumption for all types is 330 mW (typ)
- ▶ Phase-noise compliant with IESS-308 (Intelsat)
- ▶ Proven QUBiC4X SiGe:C technology (120 GHz f_r process)
- ▶ External loop filter
- ▶ Differential input and output
- ▶ Lock-detect output
- ▶ Internally stabilized voltage reference for loop filter
- ▶ 24-pin HVQFN (SOT616-1) package

Applications: TFF11xxxHN family

- ▶ Industrial/medical test and measurement equipment
- ▶ Electronic warfare (EW)
- ▶ Electronic countermeasures (ECM)
- ▶ Point-to-point
- ▶ Point-to-multipoint
- ▶ Satellite communication/VSAT
- ▶ Radar systems

These low noise local-oscillator (LO) generators, optimized for use in many different microwave applications between 7 and 15 GHz, deliver highly accurate performance in a small footprint. They require no alignment or frequency modification on the production line, so they simplify manufacturing. High integration saves board space and makes design-in easier, for lower overall cost and faster development.

Since these ICs are manufactured in NXP's industry-leading QUBiC4X SiGe:C process, they offer better overall RF performance, are more robust than their GaAs equivalents, and consume much less power. The process technology also enables higher integration, for added features. NXP owns the industrial base for production (wafer fab, test, assembly), so volume supplies can be assured.

The TFF1003HN is the basis for the entire family of LO generators. It has VCO coverage of 12.8 to 13.05 GHz and accepts input signals from 50 to 816 MHz. The divider can be set for 16, 32, 64, 128, or 256, and the output level is -5 dBm with a stability of ± 2 dB. The family of LO generators is completed by a range of 18 different devices operating in a center frequency ranging from 7 to 15 GHz. The RF performance of all these devices is consistent with the TFF1003HN.

All the LO generators have low power dissipation (330 mW typ), and all are available in a space-saving 24-pin HVQFN package.

Full portfolio overview of low noise LO generators for general microwave applications at chapter 3.4.4

2.4 Portable devices

2.4.1 QUBiC4X SiGe:C LNAs for GPS, GloNass and Galileo with AEC-Q100 qualification

NXP's GPS low noise amplifiers offer the best reception of weak signals because of dynamic suppression of strong cellular and WLAN transmit signals. Moreover, as only two external components are required, designers can save up to 50% in PCB size and 10% in component cost.

Key features & benefits

- ▶ Low noise figure of 0.9 dB and choice of system-optimized gain of 16.5 or 18.5 dB, allowing for the best GPS reception
- ▶ Adaptive biasing dynamically suppresses strong cellular and WLAN transmit signals, further optimizing GPS reception
- ▶ Only 2 external components and 1.45 x 1.0 mm package size, enabling the smallest footprint and lowest external component cost
- ▶ AEC-Q100 qualification (BGU7004, BGU7008), meaning highest reliability under harsh conditions

Key applications

- ▶ Smart phones
- ▶ Feature phones
- ▶ Tablets
- ▶ Personal navigation devices (PND)
- ▶ Digital still camera (DSC)
- ▶ Digital video camera (DVC)
- ▶ RF front end modules (used in phones)
- ▶ Complete GPS chipset modules (used in DSC)
- ▶ Automotive applications (BGU7004/8): toll collection, emergency call
- ▶ Theft protection (laptop, ATM)

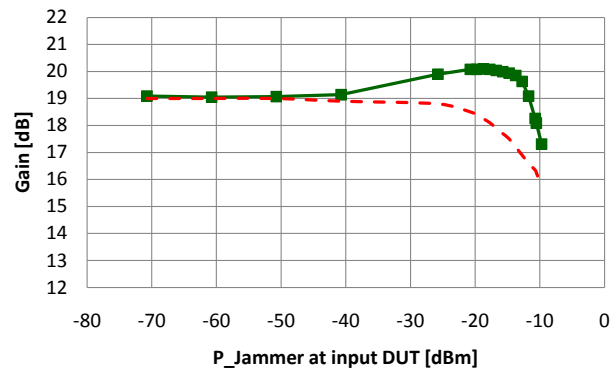

Adaptive biasing

GPS signal power levels are weak and below the noise floor at -155 dBm. Moreover, in many consumer products such as smart phones, inter-modulation and harmonics caused by strong transmitters such as WLAN, can drive the GPS LNA into compression. With adaptive biasing, increasing output power from jammers is immediately detected, and current is temporarily increased. Adaptive biasing dynamically suppresses jammers, maintaining optimal GPS signal reception for as long as possible.

Gain vs. jammer power for NXP GPS LNA adaptive biasing vs Competitor.

(Pin 1575 MHz = -45 dBm, jammer at 1850 MHz).

2.5 Industrial, scientific & medical

2.5.1 Medical applications driven by RF power: From imaging to cancer treatment, a flexible and versatile technology in the doctor's toolbox

RF technology is making its way into all kinds of medical applications, ranging from the well-known imaging techniques (MRI, EPRI) over low frequency, external heat treatment, and electro-surgical tools, to minimally invasive endoscopic cancer treatment (RF ablation). One clear trend is the increasing share of RF-based technologies for ablation. Another is the trend towards higher RF frequencies (several GHz) and higher powers (> 100 W) in order to achieve higher spatial resolution, better control, and shorter treatment times.

RF radiation is not a new technology in medicine. It is currently used for imaging purposes in MRI (magnetic resonance imaging) and EPRI (electron paramagnetic resonance imaging), techniques that employ frequencies from a few megahertz to about 500 MHz. Other well-known external heat-treatments to rejuvenate skin or relieve muscle pain make use of frequencies around 480 kHz – not too demanding in terms of RF. Surgical equipment to cut and simultaneously coagulate blood vessels runs off RF at about 5 MHz. The latter application belongs to a class of treatment techniques that is growing rapidly and uses RF radiation to deposit energy locally at various parts of the body – in general to “ablate” (remove) unwanted tissue. Inside the body, the RF energy heats the surrounding tissue until it is desiccated and/or necrotized. The damaged tissue will later be re-absorbed by the surrounding, living tissue. Further application examples for RF ablation include cancer treatment in the lung, kidney, breast, bone and liver, removal of varicose veins, treatment of heart arrhythmia, and a growing list of other applications that benefit from the high control and feedback possible with RF.

Another advantage of RF in this context is the fact that it can be applied via small catheters ending in antennas that deploy the RF signal. Unlike older, direct-current techniques, the tissue is heated only very locally around the antenna. Neighboring nerves (and the heart) are not stimulated. This led to the development of a variety of specialized catheters, used during minimally invasive surgery, along with ultrasound or X-ray imaging to determine the exact location of the RF-active part. During the treatment, the impedance of the surrounding tissue can be monitored and the end-point determined. With proper catheters, one can even achieve “self limitation” due to the reduced uptake of RF energy in desiccated tissue. Likewise, the RF frequency can be used to tune the energy deposition zone around the catheter: the higher the frequency, the smaller the penetration depth – and hence the volume to deposit the RF energy – in the watery tissue.

With the trend towards higher RF frequencies and powers, the complexity of RF generators and the requirements for the device technology also increase. Above 10 MHz, say, up to 3.8 GHz, the technology of choice for power amplifiers is Si LDMOS (laterally

diffused metal oxide semiconductor). This technology has proven to be powerful, efficient, and rugged in base stations, radar systems, broadcast transmitters, and other industrial, scientific, and medical (ISM) applications. LDMOS is available from up to 50 V supply to achieve power levels up to 1,200 W per single device, with outstanding ruggedness and high gain and efficiency. To drive and control the LDMOS power amplifier stages, it takes voltage-controlled oscillators, phase locked loops, and medium power amplifiers. These parts of the RF signal chain are conveniently available based on reliable and high volume SiGe:C (QUBiC) semiconductor technologies. Going a step further, one can even use high-speed converters to drive the signal chain entirely from the digital domain, for full and easy control over the shape and modulation of the applied RF.

RF implications

These in-situ medical applications and, in general, most of the ISM applications, usually form highly mismatched RF loads during some part of the usage cycle. This in turn means that, without protection or other measures, all of the “injected” RF power reflects back into the final stage of the amplifier and needs to be dissipated in the transistor(s), and most likely destroys the device(s) if this situation lasts too long. LDMOS transistors are designed to be extremely rugged and generally withstand these mismatch situations without degrading over time.

This device ruggedness, or the ability to withstand “harsh” RF conditions in general, be it mismatch or extremely short pulse rise and fall times, is essential for reliable device performance. RF power companies have gone to great lengths to achieve best-in-class device ruggedness. The technologies have been hardened under the most stringent ruggedness tests during development, which is particularly true for the 50 V technology. Among other factors, the base resistance of the parasitic bipolar and the drain extension of the LDMOS device play key roles in this respect.

This ruggedness, combined with the power density and the high efficiencies achievable, make LDMOS the preferred technology for RF power amplifiers up to 3.8 GHz.

2.5.2 RF-driven plasma lighting:

The next revolution in light sources are powered by solid-state RF technology

Recent developments in RF power technology, such as improved cost structure, ruggedness, and power levels of up to 1200 W per device, have enabled a breakthrough light source technology, called 'RF plasma lighting'. All RF plasma lighting sources make use of a small, electrode-less quartz lightbulb that contains argon gas and metal halide mixtures. The bulb is powered by direct RF radiation, which ignites the gas mixtures to create and power a bright plasma, the color of which can be tuned by the composition of its constituents.

This technology works without any additional electrodes in the bulb, unlike standard high-intensity discharge lamps. No electrodes means very long operating lifetimes, since the contamination and wire erosion that lead to decreased efficiency and eventual lamp failure are precluded. The RF light source lives up to 50,000 hrs when it reaches 50% of its original light output. Typical high-intensity discharge lamps, by comparison, achieve 20,000 hrs operating life. Another strong point of the plasma light is its efficiency: 1 W of RF power is converted to 130-140 lm of light. This leads to very compact, very bright lamps that easily emit 10,000 to 20,000 lm of white light with a close-to-sunlight color rendition.

The key enabler for the RF light source is RF technology, based on Si LDMOS RF power transistors. LDMOS technology operating at 28 V is the leading RF power technology for cellular base stations or broadcast transmitters as final amplifier stages in the frequency range between a few MHz up to 3.8 GHz. Recently, another LDMOS format, 50 V LDMOS, has emerged for use in broadcast, ISM, defense and avionics applications. It combines high power density to achieve power levels up to 1,200 W per single device and outstanding ruggedness, with high gain and efficiency at frequencies of up to 1.5 GHz.

Comparison of lighting technologies

The table below summarizes currently available technologies that generate bright light with varying degrees of efficiency. It lists a few key parameters, including lifetime, luminous flux, efficacy, color rendition index, color temperature, start-up time, and re-strike time (time to start after switch-off from normal operation).

Type	Lifetime (hrs)	Luminous flux (klm)	Efficacy (lm/W)	Color rendering	Color temperature (K)	Start-up time (s)	Re-strike time (s)
Incandescent	2,000	1,700	10 to 17	100	3200	0.1	0.1
Fluorescent	10,500	3,000	115	51 to 76	2940 to 6430	0.3	0.1
LED	25,000	130	60 to 100	30	6000	0.1	0.1
HID (high-intensity discharge)	20,000	25,000	65 to 115	40 to 94	4000 to 5400	60	480
RF plasma	50,000	25,000	100 to 140	70 to 94	4000 to 5500	30	25

Table 1: Comparison of light-generation. Note: numbers are only valid for a qualitative comparison. Source: www.wikipedia.org and references therein.

The plasma light source is among the brightest and most efficient available to date and boasts a very long life time. Important to note is the high brightness per bulb: much brighter than LEDs, for example. Consequently, it takes multiple LEDs to generate the light output of a single plasma light source. Hence, LED luminaries for street lighting will be considerably larger than those for plasma light sources.

RF implications

The RF plasma lighting sources can operate at a wide range of RF frequencies, but initial applications typically focus at frequencies of around a few hundred megahertz. At these frequencies both the 28 and 50 V LDMOS technologies can be used, yielding high efficiency values of 70% to more than 80% and low-heat dissipation making compact plasma lamp designs possible.

The RF-driven plasma light is a perfect example of novel applications that can be powered by RF energy in the industrial, scientific, and medical (ISM) realm. Established technologies use RF to pump a gas discharge in a laser cavity. These "gas discharge" applications and in general, most of the ISM applications, typically form highly mismatched RF loads during some part of the usage cycle. In the case of gas discharges, for example, the gas cavity acts as an "open circuit" during switch-on. This in turn means that without protection or other measures, all of the "injected" RF power reflected back into the final stage of the amplifier needs to be dissipated in the transistor(s) right there and most likely destroys the device(s) if this situation lasts too long. After the discharge strikes, the load impedance reverts to "matched," eventually, and the transistor sees an acceptable load. Obviously, these mismatched conditions occur every time the plasma is "switched on," exerting strain on the finals. LDMOS transistors are designed to be extremely rugged and generally withstand these mismatch situations without degrading over time.

This ruggedness, combined with the high power density and efficiency achievable, make LDMOS the preferred technology for RF lighting and other equally demanding applications in the ISM realm.

2.5.3 QUBiC4 Si and SiGe:C transistors for any RF function

NXP's 6th (Si) and 7th (SiGe:C) generation RF transistors offer the best RF noise figure versus gain performance at 12 GHz, drawing the lowest current. This performance allows for better signal reception at low power and enables RF receivers to operate more robustly in noisy environments. This family of 6th (Si) and 7th (SiGe:C) generation RF transistors can be used in most RF applications as low noise amplifiers (BFUx10F, BFUx30F, BFU725/N1), high linearity and high output amplifiers (BFUx60F, BFUx90F), buffer amplifiers, mixers, and oscillators.

Key features & benefits

- ▶ 40 / 110 GHz transition frequency allows for applications up to 18 GHz and beyond.
- ▶ From low noise figure of 1.45 dB and high gain of 13.5 dB at 12 GHz to high linearity of 34dBm (OIP3) at 1.8 GHz, gives a broad choice of parts for the perfect fit for each application.
- ▶ Consuming only 3 mA to generate 13.5 dB gain at 12 GHz
- ▶ Plastic surface-mount SOT343F package for high performance and easy manufacturing

Key applications

- ▶ 2nd and 3rd LNA stage and mixer stage in DBS LNBS
- ▶ Ka- / Ku-band DROs
- ▶ Satellite radio (SDARS) LNA
- ▶ C-band / X-band high-output buffer amplifier
- ▶ AMR
- ▶ WLAN / WiFi
- ▶ ZigBee
- ▶ Bluetooth
- ▶ FM radio
- ▶ GPS
- ▶ LTE, cellular, UMTS
- ▶ Mobile TV
- ▶ RKE
- ▶ High linearity applications
- ▶ Low current, battery-equipped systems
- ▶ Low noise amplifiers for microwave communications systems
- ▶ Medium output power applications
- ▶ Microwave driver / buffer applications

Demo boards and application notes

- ▶ Single-stage Ku-band LNA using BFU730F
- ▶ Single-stage 2.3-2.7 GHz LNA with BFU730F
- ▶ Single-stage 5-6 GHz WLAN LNA with BFU730F
- ▶ 1st stage SDARS LNA with BFU730F
- ▶ 2nd stage SDARS LNA with BFU690F

Full portfolio overview of 6th and 7th generation RF wideband transistors at chapter 3.3.1

2.5.4 Building on decades of innovation in microwave and radar

NXP builds on more than 50 years of history in semiconductor technology and component design. For more than three decades we have led in providing high performance RF technologies for microwave applications. The company has built a strong position in the field of RF small signal and power transistors for microwave amplifiers with best-in-class Si devices and processing technologies.

We were the first semiconductor company to supply S-band transistors (2700 to 3500 MHz) based on laterally diffused metal-oxide-silicon (LDMOS). To further strengthen our position towards the future, we are currently developing new high power and high-bandwidth technologies based on gallium nitride (GaN) material.

Another enabling technology is NXP's BICMOS process QUBiC, which is available in several variants with f_T up to 200 GHz, each specialized to address specific small signal RF applications.

The product portfolio encompasses:

- Low noise amplifiers (LNAs)
- Variable gain amplifiers (VGAs)
- Mixers
- Local oscillators (LOs)
- LO generators

NXP now also focuses on architectural breakthroughs and has developed highly integrated products for microwave and millimeter wave. One example is a family of LO generators from 7 GHz to 15 GHz with integrated PLL and VCO. Another example is an integrated RF power module in S-band (3.1-3.5 GHz) at 200 W.

RF small signal product highlight:

Manufactured in NXP's breakthrough QUBiC4X SiGe:C process technology, these highly integrated, alignment-free LO generators TFF1xxxHN are low-power, low-spurious solutions that simplify design-in and lower the total cost of ownership.

Features

- ▶ Lowest noise LO generators for 7 to 15 GHz range
- ▶ Maximum power consumption for all types, typical 330 mW
- ▶ Phase-noise compliant with IESS-308 (Intelsat)
- ▶ Proven QUBiC4X SiGe:C technology (120 GHz f_T process)
- ▶ External loop filter
- ▶ Differential input and output
- ▶ Lock-detect output
- ▶ Internally stabilized voltage reference for loop filter

RF power product highlight

The BLS6G2933P-200 is the first LDMOS-based, industry-standard pallet produced by NXP. This pallet offers more than 40% efficiency and includes the complete bias network for S-band applications.

Features:

- ▶ Reduces component count and considerably simplifies radar system design
- ▶ P1 dB output power 200 W
- ▶ Efficiency > 40%
- ▶ Industry-standard footprint
- ▶ 50 Ω in/out matched for entire bandwidth
- ▶ Lightweight heat sink included
- ▶ The advantages of LDMOS in comparison with Bipolar
 - Higher gain and better efficiency
 - Better ruggedness – overdrive without risk to 5 dB
 - Improved pulse droop and insertion phase
 - Consistent performance – no tuning required
 - Improved thermal characteristics – no thermal runaway
 - Non-toxic packaging and RoHS-compliance

Microwave applications and bands of operation

System	Frequency
VHF and UHF	<1 GHz
L-band	1200 - 1400 MHz
S-band	2700 - 3500 MHz
X-band	8000 - 12000 MHz
Commercial Avionics	
DME (Distance Measuring Equipment)	978 - 1215 MHz
Transponders	
Mode A / Mode S / Mode C / TCAS	1030 - 1090 MHz
Military Avionics	
IFF transponders (Identification, Friend or Foe)	1030 - 1090 MHz
TACAN (Tactical Air Navigation)	960 - 1215 MHz
JTIDS / MIDS (Joint Tactical Information Distribution System)	960 - 1215 MHz
Marine radar	9300 - 9500 MHz

For a complete list of products, see the respective small signal and power microwave pages

2.5.5 Digital broadcasting at its best

The BLF881 / BLF888A transistor line-up enables today's most powerful and efficient digital broadcast transmitter applications.

BLF881

This transistor is based on NXP's 50 V LDMOS technology and features 120 W RF output power for broadcast transmitter and industrial applications. An unmatched device, the BLF881 can be used in the HF to 1 GHz range. The excellent ruggedness and broadband performance of this device makes it ideal for digital transmitter applications – either on its own or as a driver in combination with the high power transistor BLF888A.

The BLF881 is also available in an earless version, the BLF881S, which enables an even more compact PCB design.

BLF888A

Running from a 50 V supply voltage, the BLF888A is a 600W LDMOS RF power transistor for broadcast transmitter and industrial applications. Being a matched device, BLF888A is optimized for digital signal broadcasting and can deliver 120 W average DVB-T output power over the full UHF band from 470 MHz to 860 MHz with 20 dB power gain and 31% drain efficiency. The excellent ruggedness of this transistor (it withstands a VSWR in excess of 40:1) makes it the ultimate choice as final stage for digital transmitter applications – ideally accompanied by a BLF881 as the driver. This device is also available as an earless package, denoted BLF888AS, to enable surface mount assembly processes and take optimum advantage of the very low thermal resistance package.

Key features and benefits

- ▶ Excellent efficiency and reliability
- ▶ Highest power levels in the market
- ▶ Best-in-class ruggedness designed into all devices
- ▶ Best broadband performance
- ▶ Easy power control
- ▶ Best-in-class design support
- ▶ Low thermal resistance design for unrivalled reliability
- ▶ Advanced flange material for optimum thermal behavior and reliability
- ▶ Designed for broadband operation (470 to 860 MHz)

Key applications

- ▶ Analogue and digital TV transmitters

Function	Type	f_{\min} (MHz)	f_{\max} (MHz)	CW - P1dB (W)	VDS (V)	DVB-T P_L (W)	DVB-T η_D (%)	DVB-T G_p (dB)	Package
Driver	BLF642	1	1400	35	32	7	33	20	SOT467C
	BLF881(S)	1	1000	140	50	30	31	21	SOT467C
Final	BLF884P	470	860	350	50	70	32	20	SOT539A
	BLF888A(S)	470	860	600	50	120	31	21	SOT539

2.5.6 Broadband medium power amplifiers for all 400 to 2700 MHz applications

NXP medium power MMICs BGA7xxx for broadband applications

Produced in NXP's proven QUBiC4 Si BiCMOS process, these MMICs bring improved thermal performance and added-value features to all 400 to 2700 MHz applications – at a lower cost than GaAs versions.

Features

- ▶ ESD protection at all pins
- ▶ Single-supply operation (3.3 or 5 V)
- ▶ Integrated active biasing
- ▶ Fast shutdown
- ▶ Quiescent current adjustment
- ▶ Two package options, smallest leadless package (3 x 3 mm) and leaded SOT-89

Applications

- ▶ Wireless infrastructure (base station, repeater)
- ▶ eMetering
- ▶ Broadband CPE (MoCA)
- ▶ Satellite Master Antenna TV (SMATV)
- ▶ Industrial applications
- ▶ W-LAN / ISM / RFID

Manufactured in NXP's breakthrough QUBiC4 process, these MMICs deliver RF performance comparable to that of their GaAs equivalents, but at a lower cost and with additional features, like thermal performance and ESD robustness. The QUBiC4 process makes it possible to support even more features, including active biasing, quiescent adjustment, VGA interfaces, and a power saving shutdown mode. To increase design flexibility, all the MMICs support single-supply (3.3/5 V) operation. And, to save space, they are available in the smallest package size (3 x 3 mm) and with leadless options.

Base station

The high power level of these MMICs makes them an excellent choice for mobile infrastructure applications. They offer the highest gain over all base stations frequencies. The quiescent current feature allows for high efficiency and linearity in Class AB operation. The bias circuitry delivers stable performance over temperature and supply variations. The integrated shutdown function is a power-saving feature and can be used for fast shutdown. The MMICs can be tuned for any band between VHF and 2.7 GHz. Unbeatable thermal performance (30 °C/W) improves overall quality and reliability.

eMetering

These MMICs are also very well suited to eMetering applications in the 900-2400 MHz ISM band. High integration and single supply operation mean that the MMICs can be combined with just a few other components to create a full-featured solution. The MMICs can be operated on battery power (with an energy saving shutdown mode) and are tunable between Class A and AB. They can also work on a power line network, so they support gas metering with or without a power connection. The built-in reliability and quality of a silicon-based process provides longevity, as does the improved ESD performance.

Type	Package		f (MHz)	Supply			Shutdown control					RF performance				RF performance			
				V _{cc}		I _{cc}	V _{I(DL)SHDN}		V _{I(DH)SHDN}		I _{I(DL)SHDN}	Typ @ f = 940 MHz				Typ @ f = 1960 MHz

The specifications of the BGA7130 and BGA7133 are target specifications until development is completed.

* = check status at 3.1 new products, as this type has not been released for mass production.

2.6 Technology

2.6.1 Boost efficiency and operational cost in wireless infrastructure with GaN

NXP GaN technology for RF power

This new gallium-nitride (GaN) technology, the result of a collaborative development effort, enables high-power amplifiers that deliver very high efficiency in next-generation wireless communication systems.

Features

- ▶ Power density up to five times higher than Si LDMOS
- ▶ 50 V operation
- ▶ High gain
- ▶ High efficiency
- ▶ High reliability
- ▶ Low parasitics

Benefits

- ▶ High frequency combined with high power
- ▶ Broadband operation that lets a single power amplifier function at multiple frequencies
- ▶ Enabling technology for next-generation, high power, Switch Mode Power Amplifier (SMPA) architectures
- ▶ Lowers system costs and operational expenditures
- ▶ Ideal for tower-top base stations

Applications

- ▶ Cellular base stations
- ▶ WiMAX
- ▶ Broadcast
- ▶ Radar

Collaborating with United Monolithic Semiconductors and the Fraunhofer Institute for Applied Solid State Physics, NXP has developed a gallium-nitride (GaN) process technology that boosts performance of next-generation RF power amplifiers. The new GaN process, with its high frequency combined with high power, puts NXP in the ideal position to support future applications while continuing to evolve its well-established LDMOS technology. The GaN technology delivers numerous benefits to manufacturers of infrastructure equipment. Using the GaN technology in a transmitter represents a significant cost savings in system operation due to the high efficiencies achievable, along with major improvements in system performance and flexibility. Most of today's base station power amplifiers are limited to specific applications. The new GaN-based technology creates a "universal transmitter" that can be applied in multiple systems and frequencies. Such universal power amplifier architecture, enabled by NXP's GaN

technology, simplifies transmitter production and logistics. The technology also allows operators to switch between frequency bands to instantly meet demands in the base station's coverage area. GaN transistors enable much more efficient power amplifiers and, as a result, drive down the operational costs of telecom operators. GaN transistors can operate at much higher junction temperatures than Si- and GaAs-based devices, so GaN is an ideal candidate for environments with reduced cooling capabilities, such as tower-top base stations. Also, with its high power densities, GaN has the potential to expand into other areas, including high power broadcast applications, where solid-state power amplifiers built with vacuum tubes are still the norm. NXP's first GaN broadband power amplifiers are expected to be available at the beginning of 2012, with Switch Mode Power Amplifiers (SMPAs) following in subsequent years.

Performance (targets)	
Saturated output power at 50 V	100 W
Frequency	2.2 GHz
Maximum PAE	68%
Linear power gain	19 dB
2C-WCDMA linear efficiency with DPD	40% at -52 dBc IM3 at 8 dB OPBO

Assembly of GaN power bar in standard ceramic package

2.6.2 Looking for a leader in SiGe:C? You've just found us!

NXP QUBiC4 process technology

NXP's innovative, high performance SiGe:C QUBiC4 process lets customers implement more functions into less space, with the added benefits of competitive cost, superb reliability, and significant manufacturing advantages. Our state-of-the-art QUBiC4 technology and extensive IP availability speed the migration from GaAs components to silicon by enabling cutting-edge products with best-in-class low noise performance, linearity, power consumption, immunity to out-of-band signals, spurious performance, and output power. QUBiC is a mature process that has been in mass production since 2002 and has had continuous performance upgrades added ever since. The QUBiC4 process is automotive-qualified and dual-sourced in two high volume, NXP-owned 8-inch waferfabs that provide flexible, low-cost manufacturing with high yields and very low ppm in the field.

QUBiC4 in three variants, each having its own benefits for specific application areas:

QUBiC4+

The QUBiC4+ BiCMOS process features 0.25 μm CMOS with 5 metal layers for integration of dense digital logic-based smart functionality, a rich set of active and passive devices for high frequency mixed-signal designs including thick top metal layers for high quality inductors. The device set includes a 37 GHz f_T NPNs with 3.8 V breakdown voltage (BV_{ce0}) and low noise figure ($NF < 1.1 @ 2 \text{ GHz}$), 7 GHz f_T VPNNs, a 28 GHz high voltage NPN with 5.9 V breakdown voltage, differential and single-ended varicaps with Q-factor > 30 , scalable inductors with Q-factor > 20 , 800 MHz FT lateral PNP's, 0.25 μm CMOS, 137, 220 & 12 to 2000 ohm/sq. poly and active resistors, a 270 ohm/sq. SiCr thin film resistor, a 5.7 fF/ μm^2 oxide capacitor and a 5 fF/ μm^2 MIM capacitor, 1 to 6 fF/ μm^2 oxide capacitors and various other devices including L-PNPs, isolated NMOS, 3.3 V CMOS and RF-CMOS transistors capacitor. The QUBiC4+ process is silicon-based and ideal for applications up to 5 GHz ($f_T = 37 \text{ GHz}$, $NF < 1.1 \text{ dB @ } 1.2 \text{ GHz}$), as well as for medium power amplifiers up to 33 dBm.

QUBiC4X

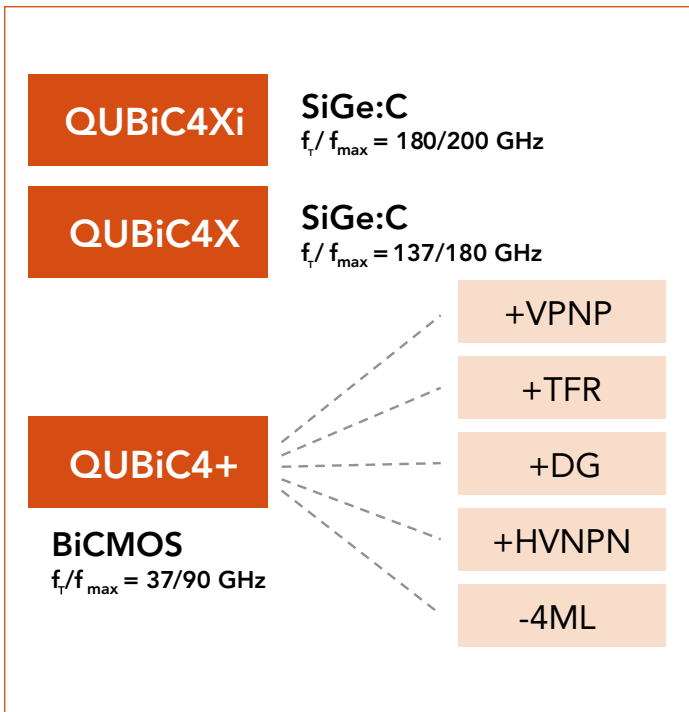

The QUBiC4X BiCMOS process is a SiGe:C-based extension of the QUBiC process for high frequency mixed-signal designs and offers a rich set of devices for QUBiC high frequency mixed-signal designs, including a 140 GHz f_T NPN with 2.5 V breakdown voltage and very low noise figure ($NF < 1.0 @ 10 \text{ GHz}$), 0.25 μm CMOS, a variety of resistors, a 5.7 fF/ μm^2 oxide capacitor, and a 5 fF/ μm^2 MIM capacitor.

The QUBiC4X is ideal for applications that typically operate at up to 30 GHz ($f_T = 137 \text{ GHz}$, $NF < 0.8 \text{ dB @ } 10 \text{ GHz}$) and ultra-low noise applications such as LNAs and mixers.

QUBiC4Xi

The QUBiC4Xi BiCMOS process further enhances the QUBiC4X process and offers an additional features set of devices for high frequency mixed-signal designs, including 180 GHz f_T NPNs with 1.4 V breakdown voltage and ultra-low noise figure ($NF < 0.7 @ 10 \text{ GHz}$), 0.25 μm CMOS, several resistors, a 5.7 fF/ μm^2 oxide capacitor and a 5 fF/ μm^2 MIM capacitor. QUBiC4Xi represents the newest SiGe:C process, with improved on $f_T (> 200 \text{ GHz})$ and even lower noise figure ($NF < 0.57 \text{ dB @ } 10 \text{ GHz}$). It is ideal for applications beyond 30 GHz, such as LO generators.

QUBiC4+

- ▶ Baseline, 0.25um CMOS, single poly, 5 metal
- ▶ Digital gate density 26k gates/mm²
- ▶ $f_T/f_{MAX} = 37/90$ GHz
- ▶ +TFR – Thin Film Resistor
- ▶ +DG – Dual Gate Oxide MOS
- ▶ +HVNPN – High Voltage NPN
- ▶ +VPNP – Vertical PNP (high V_{early})
- ▶ -4ML – high density 5fF/μm² MIM capacitor
- ▶ Wide range of active and high quality passive devices
- ▶ Optimized for up to 5 GHz applications

QUBiC4X

- ▶ SiGe:C process
- ▶ $f_T/f_{MAX} = 137/180$ GHz
- ▶ Optimized for up to 30 GHz applications
- ▶ Transformers

QUBiC4Xi

- ▶ SiGe:C process
- ▶ Improves f_T/f_{max} up to 180/200 GHz
- ▶ Optimized for ultra-low noise for microwave above 30 GHz

Inductors (1.5nH @ 2 GHz) - scalable	Q > 21, Thick Metal, Deep trench isolation, High R substrate	Q > 21, Thick Metal, Deep trench isolation, High R substrate	Q > 21, Thick Metal, Deep trench isolation, High R substrate
Other devices	LPNP, Isolated NMOS	Isolated-NMOS tbd	LPNP, Isolated-NMOS tbd
Mask count	31 / 32 (MIM) / 33 (DG)	35 (MIM)	35 (MIM)

2.6.3 Completing NXP's RF power transistor offering: products in plastic packages (OMP)

NXP is currently developing a complete line of overmolded plastic (OMP) RF power transistors and MMICs with peak powers ranging from 3 to 500 W. The main benefit of plastic packages is cost effectiveness with little or no impact on performance. The range of plastic devices will complement the extensive range of RF power products that NXP offers in ceramic packages for all frequency ranges and applications up to 2.45 GHz.

The products in development include

- ▶ Single-stage broadband drivers in HSOP-outlines, from 3 to 10 W
 - ▶ Single-stage OMP drivers from 25 to 45 W, replacing their ceramic equivalents for cost sensitive applications
 - ▶ Dual-stage MMICs from 30 to 60 W that can be used as high-gain drivers or combined as low power dual-stage Doherty amplifiers
 - ▶ Fully integrated plug-and-play Doherty PAs in a single package (50 to 100 W)
 - ▶ Final transistors in OMP package (SOT502-sized) ranging from 140 to 200 W in frequency bands from 730 MHz to 2.2 GHz
 - ▶ Final transistors in OMP package (SOT502-sized) ranging from 3 to 500 W in ISM frequency bands from a few MHz up to 2.45 GHz
- Some of these products are available for sampling now, while the rest of the portfolio will be rolled out throughout 2011.

Function	Type	f_{min} (MHz)	f_{max} (MHz)	P1dB (W)	Package	Planned release	Description
HPA	BLP05H6100P	1	500	100	SOT1138	Q112	Gen6 high-voltage OMP push-pull LDMOS transistor for broadcast/ISM applications

3. Products by function

NXP RF product catalog:

<http://www.nxp.com/rf>

3.1 New products

DEV = In development

CQS = Customer qualification samples

RFS = Release for supply

Type	Application / Description	Expected status May 2011	Planned release	Chapter
NEW: Wideband transistors				
BFU610F	Gen6 wideband transistor	RFS	Released	3.3.1
BFU630F	Gen6 wideband transistor	RFS	Released	3.3.1
BFU660F	Gen6 wideband transistor	RFS	Released	3.3.1
BFU690F	Gen6 wideband transistor	RFS	Released	3.3.1
BFU710F	Gen7 wideband transistor	RFS	Released	3.3.1
BFU730F	Gen7 wideband transistor	RFS	Released	3.3.1
BFU760F	Gen7 wideband transistor	RFS	Released	3.3.1
BFU790F	Gen7 wideband transistor	RFS	Released	3.3.1
NEW: AEC-Q101 qualified wideband MMICs and transistors				
BGA2002	Low noise wideband amplifier MMIC	RFS	Released	3.4.1
BFR94A	RF wideband transistor	RFS	Released	3.3.1
BFR94AW	RF wideband transistor	RFS	Released	3.3.1
NEW: SiGe:C LNAs (for e.g. GPS)				
BGU7005	SiGe:C MMIC, incl matching output for GPS LNA, 16.5 dB	RFS	Released	3.4.1
BGU7007	GPS LNA, 18.5 / 19.5 dB gain	RFS	Released	3.4.1
BGU7004	GPS LNA, 16.5 / 17.5 dB gain, AEC-Q100	RFS	Released	3.4.1
BGU7008	GPS LNA, 18.5 / 19.5 dB gain, AEC-Q100	RFS	Released	3.4.1
BGU7003W	General-purpose unmatched LNA for FM radio	CQS	Q2 2011	3.4.1
NEW: LNAs for set-up boxes				
BGU7042	LNA for STB tuning	RFS	Released	3.4.1
BGU7041	LNA for STB tuning	RFS	Released	3.4.1
NEW: General purpose wideband amplifiers (50 Ω gain blocks)				
BGA2802	IF gain block 25 dB	RFS	Released	3.4.1
BGA2803	IF gain block 23.4 dB	RFS	Released	3.4.1
BGA2870	IF gain block 31 dB	RFS	Released	3.4.1
NEW: Medium power amplifier MMICs				
BGA7124	Medium power amplifier, 24 dBm P1dB, leadless SOT908	RFS	Released	3.4.1
BGA7024	Medium power amplifier, 24 dBm P1dB, leaded SOT89	RFS	Released	3.4.1
BGA7127	Medium power amplifier, 27 dBm P1dB, leadless SOT908	RFS	Released	3.4.1
BGA7027	Medium power amplifier, 27 dBm P1dB, leaded SOT89	RFS	Released	3.4.1
BGA7130	Medium power amplifier, 30 dBm P1dB, leadless SOT908	DEV	Q4 2011	3.4.1
NEW: VGAs for wireless infrastructures				
BGA7350	Dual IF VGA, control range 24 dB	RFS	Released	3.4.1
BGA7351	Dual IF VGA, control range 28 dB	CQS	Q3 2011	3.4.1
BGA7202	Tx RF VGA, 0.7 - 2.2 GHz	CQS	Q3 2011	3.4.1
BGA7204	Tx RF VGA, 0.7 - 2.8 GHz	CQS	Q3 2011	3.4.1
NEW: LNAs for wireless infrastructures				
BGU7051	LNA 900 MHz	CQS	Q2 2011	3.4.1
BGU7052	LNA 1.9 GHz	CQS	Q2 2011	3.4.1
BGU7053	LNA 2.5 GHz	CQS	Q2 2011	3.4.1
New: LO generators for wireless infrastructures				
BGX7300	Rx LO generator, 400 MHz to 3 GHz	DEV	Q4 2011	3.4.2
New: IQ modulators for wireless infrastructures				
BGX7100	IQ modulator, OIP3 30 dB, NF 165 dBm/Hz, P < 1 W, 350 MHz	DEV	Q4 2011	3.4.2
NEW: Dual mixers for wireless infrastructures				
BGX7220	Dual mixer, NF 8 dB, IIP3 30 dBm, P < 1 W, 700 MHz to 1.2 GHz	DEV	Q4 2011	3.4.2
BGX7221	Dual mixer, NF 8 dB, IIP3 30 dBm, P < 1 W, 1.7 GHz to 2.7 GHz	DEV	Q4 2011	3.4.2

Type	Application / Description	Expected status May 2011	Planned release	Chapter
------	---------------------------	--------------------------	-----------------	---------

NEW: Low noise LO generators for VSAT applications

TFF1007HN	Low noise LO generator for VSAT applications	RFS	Released	3.4.4
TFF1008HN	Low noise LO generator for VSAT applications	RFS	Released	3.4.4

NEW: RF satellite ICs

TFF1014HN	Satellite LNB downconverter IC	RFS	Released	3.4.3
TFF1015HN	Satellite LNB downconverter IC	RFS	Released	3.4.3
TFF1017HN	Satellite LNB downconverter IC	RFS	Released	3.4.3
TFF1018HN	Satellite LNB downconverter IC	RFS	Released	3.4.3

NEW: RF CATV modules

CGY1041	1 GHz, 21 dB gain push-pull, GaAs HFET SOT115	RFS	Released	3.6.2
CGY1043	1 GHz, 23 dB gain push-pull, GaAs HFET SOT115	RFS	Released	3.6.2
CGY1049	1 GHz, 29 dB gain push-pull, GaAs HFET SOT115	RFS	Released	3.6.2
CGY1032	1 GHz, 32 dB gain push-pull, GaAs HFET SOT115	RFS	Released	3.6.2
CGD1046Hi	1 GHz, 26 dB gain power doubler, GaAs HFET SOT115	RFS	Released	3.6.3
BGO807CE	870 MHz, forward path optical receiver, SOT115	RFS	Released	3.6.4
CGD982HCi	1 GHz, 22 dB gain GaAs high output power doubler	RFS	Released	3.6.3
CGD985HCi	1 GHz, 25 dB gain GaAs high output power doubler	RFS	Released	3.6.3
CGD987HCi	1 GHz, 27 dB gain GaAs high output power doubler	RFS	Released	3.6.3

NEW: RF high-speed data converters

ADC1613D series	Dual 16-bit ADC up to 65/80/105/125 Msps	RFS	Released	3.8.1
ADC1613S series	Single 16-bit ADC up to 65/80/105/125 Msps	RFS	Released	3.8.1
ADC1610S series	Single 16-bit ADC up to 65/80/105/125 Msps	RFS	Released	3.8.1
ADC1415S series	Single 14-bit ADC up to 65/80/105/125 Msps	RFS	Released	3.8.1
ADC1413D series	Dual 14-bit ADC up to 65/80/105/125 Msps	RFS	Released	3.8.1
ADC1413S series	Single 14-bit ADC up to 65/80/105/125 Msps	RFS	Released	3.8.1
ADC1412D series	Dual 14-bit ADC up to 65/80/105/125 Msps	RFS	Released	3.8.1
ADC1410S series	Single 14-bit ADC up to 65/80/105/125 Msps	RFS	Released	3.8.1
ADC1215S series	Single 12-bit ADC up to 65/80/105/125 Msps	RFS	Released	3.8.1
ADC1213D series	Dual 12-bit ADC up to 65/80/105/125 Msps	RFS	Released	3.8.1
ADC1213S series	Single 12-bit ADC up to 65/80/105/125 Msps	RFS	Released	3.8.1
ADC1212D series	Dual 12-bit ADC up to 65/80/105/125 Msps	RFS	Released	3.8.1
ADC1210S series	Single 12-bit ADC up to 65/80/105/125 Msps	RFS	Released	3.8.1
ADC1207S080	Single 12-bit ADC 80 Msps	RFS	Released	3.8.1
ADC1206S series	Single 12-bit ADC up to 40/55/70 Msps	RFS	Released	3.8.1
ADC1115S125	Single 11-bit ADC up to 125 Msps	RFS	Released	3.8.1
ADC1113D125	Dual 11-bit ADC up to 125 Msps	RFS	Released	3.8.1
ADC1113S125	Single 11-bit ADC up to 125 Msps	RFS	Released	3.8.1
ADC1112D125	Dual 11-bit ADC up to 125 Msps	RFS	Released	3.8.1
ADC1015S series	Single 10-bit ADC up to 65/80/105/125 Msps	RFS	Released	3.8.1
ADC1010S series	Single 10-bit ADC up to 65/80/105/125 Msps	RFS	Released	3.8.1
ADC1006S series	Single 10-bit ADC up to 55/70 Msps	RFS	Released	3.8.1
ADC1005S060	Single 10-bit ADC 60 Msps	RFS	Released	3.8.1
ADC1004S series	Single 10-bit ADC 30/40/50 Msps	RFS	Released	3.8.1
ADC1003S series	Single 10-bit ADC 30/40/50 Msps	RFS	Released	3.8.1
ADC1002S020	Single 10-bit ADC 20 Msps	RFS	Released	3.8.1
ADC0808S series	Single 8-bit ADC up to 125/250 Msps	RFS	Released	3.8.1
ADC0804S series	Single 8-bit ADC up to 30/40/50 Msps	RFS	Released	3.8.1
ADC0801S040	Single 8-bit ADC 40 Msps	RFS	Released	3.8.1
DAC1408D series	Dual 14-bit DAC up to 650/750 Msps	RFS	Released	3.8.2
DAC1405D series	Dual 14-bit DAC up to 650/750 Msps	RFS	Released	3.8.2
DAC1403D160	Dual 14-bit DAC 160 Msps	RFS	Released	3.8.2
DAC1401D125	Dual 14-bit DAC 125 Msps	RFS	Released	3.8.2
DAC1208D series	Dual 12-bit DAC up to 650/750 Msps	RFS	Released	3.8.2
DAC1205D series	Dual 12-bit DAC up to 650/750 Msps	RFS	Released	3.8.2
DAC1203D160	Dual 12-bit DAC 160 Msps	RFS	Released	3.8.2
DAC1201D125	Dual 12-bit DAC 125 Msps	RFS	Released	3.8.2
DAC1008D series	Dual 10-bit DAC up to 650/750 Msps	RFS	Released	3.8.2
DAC1005D series	Dual 10-bit DAC up to 650/750 Msps	RFS	Released	3.8.2
DAC1003D160	Dual 10-bit DAC 160 Msps	RFS	Released	3.8.2
DAC1001D125	Dual 10-bit DAC 125 Msps	RFS	Released	3.8.2

NEW: RF power transistors

BLF6G22LS-40P	Gen6 ceramic push-pull driver/final LDMOS transistor for WCDMA & LTE applications	DEV	Q311	3.7.1.4
BLF6G27LS-40P	Gen6 ceramic push-pull driver/final LDMOS transistor for LTE applications	DEV	Q311	3.7.1.5
BLF7G10LS-250	Gen7 ceramic LDMOS transistor for GSM & LTE applications	DEV	Q311	3.7.1.1
BLF7G21LS-160P	Gen7 ceramic push-pull LDMOS transistor for TD-SCDMA applications	DEV	Q311	3.7.1.4
BLF7G22LS-100P	Gen7 ceramic push-pull LDMOS transistor for WCDMA applications	DEV	Q411	3.7.1.4

3.2 RF diodes

3.2.1 Varicap diodes

Varicap selection guide on www.nxp.com/varicaps
Easy-to-use parametric filters help you to choose the right varicap for your design.

Why choose NXP's varicap diodes:

- ▶ Reference designs for TV and radio tuning
- ▶ Direct matching process
- ▶ Small tolerances
- ▶ Short lead time
- ▶ Complete portfolio covering broad frequency range and variety in package (including leadless)
- ▶ Reliable volume supply

VCO and FM radio tuning varicap diodes

3.2.2 PIN diodes

Pin diode selection guide on www.nxp.com/pindiodes
Easy-to-use parametric filters help you to choose the right pin diode for your design.

Why choose NXP's PIN diodes:

- ▶ Broad portfolio
- ▶ Unrivalled performance
- ▶ Short lead time
- ▶ Low series inductance
- ▶ Low insertion loss
- ▶ Low capacitance

Look for more graphs showing the Pin diode line-up at other frequencies on our web site: www.nxp.com/pindiodes

3.2.4 Schottky diodes

Schottky diode selection guide on www.nxp.com/rfschottkydiodes
 Easy-to-use parametric filters help you to choose the right schottky diode for your design.

Why choose NXP's schottky diodes

- ▶ Low diode capacitance
- ▶ Low forward voltage
- ▶ Single- and triple-isolated diode
- ▶ Small package

Applications

- ▶ Digital applications:
 - Ultra high-speed switching
 - Clamping circuits
- ▶ RF applications:
 - Diode ring mixer
 - RF detector
 - RF voltage doubler

Low capacitance schottky diodes

Type	Package	Configuration	V_R max. (V)	I_F max. (mA)	V_F max. (mV)	C_d max. (pF)
BAT17	SOT23	single	4	30	450 @ IF = 1 mA	1 @ VR = 0 V
PMBD353	SOT23	dual series	4	30	450 @ IF = 1 mA	1 @ VR = 0 V
PMBD354 [^]	SOT23	dual series	4	30	450 @ IF = 1 mA	1 @ VR = 0 V
1PS76SB17	SOD323	single	4	30	450 @ IF = 1 mA	1 @ VR = 0 V
1PS66SB17	SOT666	triple isolated	4	30	450 @ IF = 1 mA	1 @ VR = 0 V
1PS79SB17	SOD523	single	4	30	450 @ IF = 1 mA	1 @ VR = 0 V
1PS88SB82	SOT363	triple isolated	15	30	340 @ IF = 1 mA	1 @ VR = 0 V
1PS70SB82	SOT323	single	15	30	340 @ IF = 1 mA	1 @ VR = 0 V
1PS70SB84	SOT323	dual series	15	30	340 @ IF = 1 mA	1 @ VR = 0 V
1PS70SB85	SOT323	dual c.c	15	30	340 @ IF = 1 mA	1 @ VR = 0 V
1PS70SB86	SOT323	dual c.a.	15	30	340 @ IF = 1 mA	1 @ VR = 0 V
1PS66SB82	SOT666	triple isolated	15	30	340 @ IF = 1 mA	1 @ VR = 0 V
1PS10SB82	SOD882	single	15	30	340 @ IF = 1 mA	1 @ VR = 0 V

3.3 RF Bipolar transistors

3.3.1 Wideband transistors

RF wideband transistor selection guide on www.nxp.com/rftransistors
 Easy-to-use parametric filters help you to choose the right RF wideband transistor for your design.

Why choose NXP's wideband transistors

- ▶ Broad portfolio (1st - 7th generation)
- ▶ Short lead time
- ▶ Smallest packages
- ▶ Volume delivery

Wideband transistors

The f_T - I_C curve represents Transition Frequency (f_T) characteristics as a function of collector current (I_C) for the six generations of RF wideband transistors. A group of transistors having the same collector current (I_C) and similar transition frequencies (f_T) represents a curve. The curve number matches products in the table, detailing their RF characteristics.

Wideband transistors line-up per frequency

Figure 1

Figure 2

Pin	Description
Type (see Fig.1)	
1	collector
2	base
3	emitter
4	emitter
Type/X (see Fig.1)

3.4 RF ICs

3.4.1 RF MMIC amplifiers and mixers

RF MMIC amplifiers and mixers selection guide on www.nxp.com/mmics
Easy-to-use parametric filters help you to choose the right zRF MMIC for your design.

Why choose NXP's RF MMIC amplifiers and mixers

- ▶ Reduced RF component count
- ▶ Easy circuit design-in
- ▶ Reduced board size
- ▶ Short time-to-market
- ▶ Broad portfolio
- ▶ Volume delivery
- ▶ Short lead time

3.4.2 Wireless infrastructure ICs

Low noise LO generator for wireless infrastructures

Type	Package	f _{IN(REF)}	V _{CC}	I _{CC}	Noise 1 MHz offset @5.3 GHz	Output buffer (P _o)
			Typ	Typ	Typ	Typ
		(MHz)	(V)	(mA)	(dBc/Hz)	(dBm)
BGX7300*	SOT617	10-160	3.3	140	-131	0 -10

IQ modulator for wireless infrastructures

Type	Package	Bandwidth of IQ modulator (MHz)	V _{CC} (V)	I _{CC} (mA)	NFL (Output noise floor) (dBm/Hz)	Output	Voltage gain
						OIP3	G _v
						(dBm)	(dB)
BGX7100*	SOT616	650	5	180	-159	27	1.5

Dual mixer for wireless infrastructures

Type	Package	Second order spur rejection (2RF-2LO) (dBc)	V _{CC} (V)	I _{CC} (mA)	Frequency range (GHz)	NF _{ssb} (small signal noise figure) (dB)	IIP3	Conversion gain
							(dBm)	(dB)
BGX7220*	SOT617	60	5	380	0.7 - 1.2	10	26	7.5
BGX7221*	SOT617	60	5	380	1.7 - 2.7	10	26	8.5

* = check status at 3.1 new products, as this type has not been released for mass production.

3.4.3 Satellite LNB RF ICs

Type	Package	Input freq range	V _{CC}	I	G _{conv}	NF	OIP3	LO Freq	Integrated Phase noise density (degrees RMS)
			(V)	(mA)	(dB)	(dB)	(dB)	(GHz)	
TFF1014HN	SOT763-1	10.7 - 12.75	5	52	36	7	13	9.75 / 10.6	1.5
TFF1015HN	SOT763-1	10.7 - 12.75	5	52	39	7	13	9.75 / 10.6	1.5
TFF1017HN	SOT763-1	10.7 - 12.75	5	52	42	7	13	9.75 / 10.6	1.5
TFF1018HN	SOT763-1	10.7 - 12.75	5	52	45	7	13	9.75 / 10.6	1.5

Bold Red = New, highly recommended product

3.4.4 Low noise LO generators for VSAT and general microwave applications

Why choose NXP's low noise LO generators

- ▶ Lowest total cost of ownership
- ▶ Alignment-free concept
- ▶ Easy circuit design-in
- ▶ Improved LO stability

Low noise LO generators for VSAT applications

Type	Package	$f_{IN(REF)}$	V_{CC}	I_{CC}	PLL phase noise @ N=64, @100 kHz	PLL $f_{o(RF)}$	Output buffer		Input
							P_o	$RL_{out(RF)}$	S_i
		(MHz)	Typ	Typ	Max	Typ	Max	Min	
TFF1003HN	SOT616	50 - 815	3.3	100	-92	12.8 - 13.05	-5	-10	-10
TFF1007HN	SOT616	230.46 - 234.38	3.3	100	-104	14.62 - 15	-3	-10	-10
TFF1008HN	SOT616	220.91 - 225.2	3.3	130	-104	14.1 - 14.4	-3	-10	-10

Low noise LO generators for general microwave applications

Type	Package	$f_{IN(REF)}$	V_{CC}	I_{CC}	PLL phase noise @ N=64		PLL			Output buffer		Input	Frequency band
					@ 100 kHz	@ 10 MHz	$f_o(RF)$			P_o	$RL_{out(RF)}$	S_i	
		(MHz)	(V)	(mA)	(dBc/Hz)	(dBc/Hz)	Min	Typ	Max	Typ	Max	Min

3.6 RF modules

CATV module selection guide on www.nxp.com/catv
Easy-to-use parametric filters help you to choose the right CATV module for your design.

Why choose NXP's RF Modules

- ▶ Excellent linearity, stability, and reliability
- ▶ Rugged construction
- ▶ Extremely low noise
- ▶ High power gain
- ▶ Low total cost of ownership

CATV types for Chinese (C-types) and 1 GHz GaAs HFET line-ups

New in our CATV hybrid portfolio are two families of products. The C-types are specially designed for the Chinese market, customized for two major governmental projects. The GaAs HFET family includes a complete 1 GHz line-up for high-end applications around the world.

Both families will be extended in the following months to cover all of the two specific market segments.

C-types (China)

- ▶ CATV push-pulls, chapter 3.6.2: BGY588C, BGE788C, CGY888C
- ▶ CATV power doublers, chapter 3.6.3: BGD712C, CGD982HCi, CGD985HCi, CGD987HCi
- ▶ CATV optical receivers, chapter 3.6.4: BGO807C, BGO807CE

1 GHz GaAs HFET high-end hybrids

- ▶ CATV push-pulls, chapter 3.6.2 : CGY1032, CGY1041, CGY1043, CGY1047, CGY1049
- ▶ CATV power doublers, chapter 3.6.3: CGD1040Hi, CGD1042Hi, CGD1044Hi, CGD1046Hi, CGD1042H, CGD1044H

NOTES: This table is for reference only.

For full data please refer to the latest datasheet.

For availability please check the NXP Sales office.

Description

- ▶ Frequency range: minimum and maximum frequency in MHz at which data are characterized (@ Ch / @ Vo)
- ▶ FL is flatness of frequency response
- ▶ The number of channels and the output voltage at which CTB, X_{mod}, CSO, IMD2 and IMD3 are characterized, are @ f_{max}
- ▶ S is minimum responsivity of optical receivers

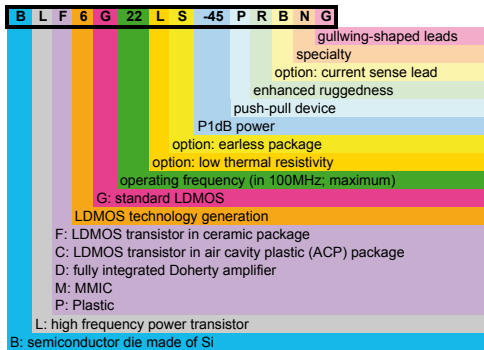

3.7 RF power transistors

NEW: RF power transistor selection guide on www.nxp.com/rfpower
Easy-to-use parametric filters help you to choose the right RF power transistor for your design.

3.7.1 Base station transistors

http://www.nxp.com/products/mosfets/rf_power_transistors_ldmos/basestations/index.html#preview

Device naming conventions RF power base stations transistors

Why choose NXP's RF power transistors for base stations:

- ▶ Leading technology (generation 6, 7 and 8 of LDMOS)
- ▶ Highest efficiency
- ▶ Best ruggedness
- ▶ Advanced Doherty amplifier designs
- ▶ Industry's first 3.8 GHz Doherty
- ▶ Industry's first 3 way, 900 MHz Doherty
- ▶ Industry's first 50V, 600W, single package Doherty

NXP offers complete line-ups of RF power transistors operating from 800 MHz right up to 3.8 GHz for base stations, covering all cellular technologies (MC-GSM/EDGE, TDMA, (TD-S)CDMA, W-CDMA/UMTS) and WiMAX infrastructures.

3.7.1.1 0.7 - 1.0 GHz line-up

3.7.2 Broadcast / ISM (industrial, scientific, medical) RF power transistors

http://www.nxp.com/products/mosfets/rf_power_transistors_ldmos/broadcast_ism/index.html#preview

Why choose NXP's RF power transistors for broadcast / ISM applications:

- ▶ Highest power
- ▶ Best ruggedness
- ▶ Best broadband performance
- ▶ Best-in-class design support
- ▶ Very low thermal resistance design for unrivalled reliability

NXP's leading LDMOS technologies, together with advanced package concepts, enable power amplifiers that deliver best-in-class performance. We offer the industry's highest power and best ruggedness for all broadcast technologies. Our portfolio includes transistors for Ultra High Frequency (UHF), Very High Frequency (VHF) and High Frequency (HF) applications and covers ISM frequency bands.

3.7.2.1 0-1000 MHz (UHF/VHF/HF/ISM) LDMOS line-up

Function	Type	f_{min} (MHz)	f_{max} (MHz)	P1dB (W)	η_D (%)	G_p (dB)	VDS (V)	Test signal	Package
Driver	BLP10H605	10	1000	5	65	20	50	CW	SOT1179

3.7.3 Microwave LDMOS RF power transistors

http://www.nxp.com/products/mosfets/rf_power_transistors_ldmos/microwave_ldmos/index.html#preview

Device naming conventions RF power microwave transistors

Why choose NXP's microwave RF power transistors

- ▶ High gain
- ▶ High efficiency
- ▶ Highest reliability
- ▶ Improved pulse droop and insertion phase
- ▶ Improved ruggedness - overdrive without risk to +5 dB
- ▶ Reduces component count and helps simplify L- and S-band radar design
- ▶ Uses non-toxic, RoHS-compliant packages

3.7.3.1 Avionics LDMOS transistors

Function	Type	f_{min} (MHz)	f_{max} (MHz)	P1dB (W)	η_D (%)	G_p (dB)	VDS (V)	Test signal	Package
Driver	BLL6H0514-25	500	1400	25	50	19	50	pulsed RF	SOT467C
	BLA6G1011-200R(G)	1030	1090	200	65	20	28	pulsed RF	SOT502A
Final	BLA6H0912-500	960	1215	500	50	17	50	pulsed RF	SOT634A
	BLA6H1011-600	1030	1090	600	52	19	48	pulsed RF	SOT539A
	BLA6H0912-1000	960	1215	1000	50	17	50	pulsed RF	SOT539A

3.7.3.2 L-band LDMOS transistors

Function	Type	f_{min} (MHz)	f_{max} (MHz)	P1dB (W)	η_D (%)	G_p (dB)	VDS (V)	Test signal	Package
Driver	BLL6H0514-25	500	1400	25	58	21	50	pulsed RF	SOT467C

3.8 High-speed data converters

As a leader in high performance mixed-signal IC products, NXP offers an extensive selection of high-speed data converters, with digital interfaces including JESD204A (in CGV™ product line), as well as CMOS LVCMOS and LVDS DDR interfaces. NXP's high-speed DACs and ADCs deliver best-in-class converter core performance and ultra-stable dynamic performance across a broad temperature range. NXP is the only semiconductor vendor to offer high-speed data converters, small signal RF building blocks, and RF power amplifiers, to enable system-level integration across the full radio transceiver chain.

More information on NXP's high-speed converters:

Bold Red = New, highly recommended product

4. Design support

This chapter will guide you through the available tools, documents, materials and links to ease the design-in of our products.

Streamline your RF design with leading RF EDA software

Electronic design automation (EDA) software lets RF engineers predict the behavior of a design by performing simulations. That helps them reduce the number of design cycles, lower design risk, and make better RF component choices. NXP's RF small signal portfolio is supported by a number of EDA toolkits, including Ansoft Designer RF, AWR Microwave Office, and Agilent Advanced Design System (ADS). Installation manual area available on the NXP web site at www.nxp.com/models.

4.1 S-parameters

S-parameters help you to simulate the behavior of NXP devices using your own adjustments for voltage, current, and more.

Wideband transistors, FETs & MMICs

For all types in the below tables there are S-parameters available. In the interactive PDF of the RF manual all these type numbers are hyperlinks that take you directly to the corresponding product information page on the NXP website. Scroll down to find the S-parameters on each product information page.

Wideband transistors		
BFG67	BFG540W	BFR93AW
BFG135	BFG541	BFS17

4.2 Simulation models

4.2.1 Spice models

Spice models help you to optimize performance and make it easier to know which external components impact performance.

Wideband transistors, FETs & Varicaps diodes

For all types in the below tables there are Spice models available. In the interactive PDF of the RF manual all these type numbers are hyperlinks that take you directly to the corresponding product information page on the NXP website. Scroll down to find the Spice models on each product information page.

Wideband transistors			
BFG10	BFG505W/X	BFM505	BFS520
BFG10/X	BFG520	BFM520	BFS540
BFG10W/X	BFG520/X	BFQ149	BFT25A
BFG135	BFG520/XR	BFQ18A	BFT92
BFG198	BFG520W	BFQ19	BFT92W
BFG21W	BFG520W/X	BFQ540	BFT93
BFG25A/X	BFG540	BFQ67	BFT93W
BFG25AW/X	BFG540/X	BFQ67W	BFU610F
BFG31	BFG540/XR	BFR106	BFU630F
BFG310/XR	BFG540W	BFR505	BFU660F
BFG310W/XR	BFG540W/X	BFR505T	BFU690F
BFG325/XR	BFG540W/XR	BFR520	BFU710F
BFG325W/XR	BFG541	BFR540	BFU725F
BFG35	BFG590	BFR92A	BFU730F
BFG403W	BFG590/X	BFR92AW	BFU760F
BFG410W	BFG591	BFR93A	BFU790F
BFG424F	BFG67	BFR93AW	PBR941
BFG424W	BFG67/X	BFS17	PBR951
BFG425W	BFG92A/X	BFS17A	PRF947
BFG480W	BFG93A	BFS17W	PRF949
BFG505	BFG94	BFS25A	PRF957
BFG505/X	BFG97	BFS505	

FETs			
BF862	BF908	BF909	BF998
BF904			

Varicap diodes			
BB145B	BB156	BB201	BB208-02
BB149	BB179	BB202	
BB149A	BB179B	BB207	

4.2.2 Interactive datasheet

Quickly and easily generate custom datasheets for our wideband RF transistors based on your specific operating conditions (<http://www.nxp.com/models>).

4.2.3 Simulation models for RF power devices

For easy design-in, NXP provides fully physics-based, electro-thermal models for the RF power transistors. These models are available for Advanced Design System (ADS)[®] from Agilent and for Microwave Office (MWO)[®] from Applied Wave Research (AWR). Newly developed models per product are based on the best-in-class RFLDMOS model, developed by NXP Research, a recognized leader in physics-based models. This concept yields highly reliable simulation results over a wide range of electrical conditions. The standard models fully support DC, AC, s-parameter (small signal), harmonic balance (large signal) and time-domain simulations. NXP RF power models allow designers to assess the performance of complex PA systems at an early stage of the development process. The available models come with all necessary libraries and documentation, and can be downloaded from NXP's website.

Product type	ADS model	MWO model	Product type	ADS model	MWO model
BLA6G1011-200R	Y	Y	BLF7G20L-250P	Y	N

4.3 Application notes

Multiple RF applications are featured in the RF Manual's first chapter including application diagrams, recommended types and product highlights. More in-depth application information is available in the second chapter. And on the NXP website we have additional application notes available in the RF section (http://www.nxp.com/products/all_appnotes/).

4.4 Demo boards

BGA2001 demo board

4.4.1 RF transistor, MMIC & IC demo boards

RF transistor, MMIC & IC demo boards are available (although limited) via your local NXP representative or authorized distributor (look at the last chapter: Web Links and Contacts).

RF small signal demo boards			
BFU690F	BGA2800	BGM1014	TFF11088HN
BFU725F/N1	BGA2801	BGU7003	TFF11092HN
BGA2001	BGA2815	BGU7005	TFF11096HN
BGA2003	BGA2816	BGU7007	TFF11101HN
BGA2011	BGA2850	BGU7030F	TFF11105HN
BGA2012	BGA2865	BGU7031	TFF11110HN

BGA2712	BGA6589	BGU7042	TFF11132HN
BGA2714	BGA6589	TFF1003HN	TFF11139HN
BGA2715	BGA7024	TFF11070HN	TFF11145HN
BGA2716	BGA7124	TFF11073HN	TFF11152HN
BGA2748	BGM1011	TFF11077HN	
BGA2771	BGM1012	TFF11080HN	
BGA2776	BGM1013	TFF11084HN	

BGU7005 demo board

BGA7124 demo board

4.4.2 RF power transistor demo boards

Demo boards are available (although limited) via your local NXP representative (see the last chapter: Web Links and Contacts).

4.4.3 High-speed converter demo boards

High-speed converter demo boards are available via your local NXP representative or authorized distributor.

ADC demo boards

Type	Description
ADC0801S040	Demo board; both CMOS and TTL outputs
ADC0804S series	Demo boards; both CMOS and TTL outputs
ADC0808S series	Demo boards; CMOS outputs
ADC1002S020	Demo board; both CMOS and TTL outputs
ADC1003S series	Demo boards; both CMOS and TTL outputs
ADC1004S series	Demo boards; both CMOS and TTL outputs
ADC1005S060	Demo board; both CMOS and TTL outputs
ADC1006S series	Demo boards; both CMOS and TTL outputs
ADC1010S series	Demo boards with both CMOS and LVDS outputs Demo boards CMOS version; SPI, regulators and CMOS buffer on board Demo boards LVDS output with SAMTEC connector; SPI, regulators on board
ADC1015S series	Demo boards with both CMOS and LVDS outputs Demo boards; CMOS version; SPI, regulators and CMOS buffer on board; Demo boards; SPI, regulators on board; LVDS output with SAMTEC connector
ADC1112D125	Demo board; CMOS version; SPI, regulators and CMOS buffer on board Demo board; SPI, regulators on board; LVDS output only SAMTEC connector
ADC1113D125	Demo board; VIRTEX 5 FPGA on board
ADC1113D125	Demo board; compliant with Lattice, Altera, Xilinx FPGA boards through specific connectors
ADC1113S125	Demo board; VIRTEX 5 FPGA on board
ADC1115S125	Demo board; both CMOS and LVDS Demo board; CMOS version; SPI, regulators and CMOS buffer on board Demo board; SPI, regulators on board; LVDS output only SAMTEC connector
ADC1206S series	Demo boards; both CMOS and TTL outputs
ADC1207S080	Demo board; both CMOS and TTL outputs
ADC1210S series	Demo boards with both CMOS and LVDS Demo boards; CMOS version; SPI, regulators and CMOS buffer on board Demo boards; SPI, regulators on board; LVDS output only SAMTEC connector
ADC1212D series	Demo boards; CMOS version; SPI, regulators and CMOS buffer on board Demo boards; SPI, regulators on board; LVDS output only SAMTEC connector
ADC1213D series	Demo boards; VIRTEX 5 FPGA on board Demo boards; compliant with Lattice, Altera, Xilinx FPGA boards through specific connectors Demo board; Lattice ECP3 FPGA on board

Type	Description
ADC1213S series	Demo boards; VIRTEX 5 FPGA on board Demo boards with both CMOS and LVDS
ADC1215S series	Demo boards; CMOS version; SPI, regulators and CMOS buffer on board Demo boards; SPI, regulators on board; LVDS output only SAMTEC connector
ADC1410S series	Demo boards with both CMOS and LVDS Demo boards; CMOS version; SPI, regulators and CMOS buffer on board Demo boards; SPI, regulators on board; LVDS output only SAMTEC connector
ADC1412D series	Demo boards; CMOS version; SPI, regulators and CMOS buffer on board Demo boards; SPI, regulators on board; LVDS output only SAMTEC connector
ADC1413D series	Demo boards; VIRTEX 5 FPGA on board Demo boards; compliant with Lattice, Altera, Xilinx FPGA boards through specific connectors
ADC1413S series	Demo board; Lattice ECP3 FPGA on board
ADC1413S series	Demo boards; VIRTEX 5 FPGA on board Demo boards; both CMOS and LVDS outputs
ADC1415S series	Demo boards; CMOS version; SPI, regulators and CMOS buffer on board Demo boards; SPI, regulators on board; LVDS output only SAMTEC connector
ADC1610S series	Demo boards; CMOS version; SPI, regulators and CMOS buffer on board Demo boards; SPI, regulators on board; LVDS output only SAMTEC connector
ADC1613D series	Demo boards; VIRTEX 5 FPGA on board Demo boards; compliant with Lattice, Altera, Xilinx FPGA boards through specific connectors
ADC1613S series	Demo boards; VIRTEX 5 FPGA on board

DAC demo boards

Type	Description
DAC1001D125	Demo board; LVCMOS inputs
DAC1003D160	Demo board; LVCMOS inputs
DAC1005D series	Demo boards; SPI, LVCMOS inputs
DAC1201D125	Demo board; LVCMOS inputs
DAC1203D160	Demo board; LVCMOS inputs
DAC1205D series	Demo boards; SPI, LVCMOS inputs
DAC1401D125	Demo board; LVCMOS inputs
DAC1403D160	Demo board; LVCMOS inputs
DAC1405D series	Demo boards; SPI, LVCMOS inputs
DAC1205D series	Demo boards; SPI, LVCMOS inputs
DAC1408D series	Demo boards; compliant with Lattice, Altera, Xilinx FPGA boards through specific connectors Demo boards; Virtex 5 FPGA Demo boards with Lattice ECP3 FPGA
DAC1208D series	Demo boards; compliant with Lattice, Altera, Xilinx FPGA boards through specific connectors Demo boards with Virtex 5 FPGA
DAC1008D series	Demo boards; compliant with Lattice, Altera, Xilinx FPGA boards through specific connectors Demo boards with Virtex 5 FPGA
KIT ECP3	ADC1413D080+DAC1408D650 with Lattice ECP3 FPGA demo kit

4.5 Samples

For samples of released or non-released products, please contact your local NXP sales representative or authorized distributor. NXP sales offices and distributors: <http://www.nxp.com/profile/sales>.

4.6 Datasheets

Datasheets are available on the NXP website: www.nxp.com.

4.7 Design-in support

If you need design-in support, please contact your local NXP sales representative or authorized distributor.

4.8 Interactive selection guides

On the NXP website you can find parametric filters to help you choose the right device for your design. Please go to the product category page of your choice and click on selection guide.

NEW: i-Phone App RF calculator tool available
Check out the App store. Android app to be released in Q3.

5. Cross-references & replacements

NXP cross-references:

<http://www.nxp.com/search/>

NXP end-of-life:

<http://www.nxp.com/products/eol/>

5.1 Cross-references: manufacturer types versus NXP types

In alphabetical order of manufacturer type

Abbreviations:

Base station	Base station power transistors
Broadcasts	Broadcast power transistors
BS diode	Band switch diode
CATV OR	CATV optical receiver
CATV PD	CATV power doubler
CATV PPA	CATV push-pull amplifier
CATV PPA/HG	CATV push-pull amplifier high gain
CATV RA	CATV reverse amplifier
FET	Field-effect transistor
Microwave	Microwave power transistors
MMIC	Monolithic microwave integrated circuit
Varicap	Varicap diode
WB trs 1-4	Wideband transistor 1-4 generation
WB trs 5-7	Wideband transistor 5-7 generation

Manufacturer type	Manufacturer	NXP type	Product family	Manufacturer type	Manufacturer	NXP type	Product family
10500	Microsemi	BLA6H0912-500	Microwave	1SV241	Sanyo	BAP64-02	PIN diode

6.2 Marking codes list

Search online on marking code: <http://www.nxp.com/package/>

In alphabetical order of marking code

In case a '%' is given in the marking code, it means this type can be assembled at different assembly sites.

p = made in Hong-Kong

t = made in Malaysia

W = made in China

7. Abbreviations

3-way	Doherty design using 3 discrete transistors	MPPM	Main and peak device realized in same push-pull transistor (2 times)
AM	Amplitude Modulation	MoCA	Multimedia over Coax Alliance
ASIC	Application Specific Integrated Circuit	MOSFET	Metal–Oxide–Semiconductor Field Effect Transistor
ASYM	Asymmetrical design of Doherty (main and peak device are different)	MPA	Medium Power Amplifier
BPF	Band Pass Filter	MRI	Magnetic Resonance Imaging
BUC	Block Upconverter	NF	Noise Figure
CATV	Community Antenna Television	NIM	Network Interface Module
CDMA	Code Division Multiple Access	NMR	Nuclear Magnetic Resonance
CMMB	Chinese Multimedia Mobile Broadcasting	PA	Power Amplifier
CMOS	Complementary Metal Oxide Semiconductor	PAR	Peak to Average Ratio
CQS	Customer Qualification Samples	PEP	Peak Envelope Power
DAB	Digital Audio Broadcasting	pHEMT	pseudomorphic High Electron Mobility Transistor
DECT	Digital Enhanced Cordless Telecommunications	PLL	Phase Locked Loop
DiSEqC	Digital Satellite Equipment Control	QUBiC	Quality BiCMOS
DSB	Digital Signal Processor	RF	Radio Frequency
DVB	Digital Video Broadcasting	RFS	Release for Supply
EDGE	Enhanced Data Rates for GSM Evolution	RoHS	Restriction of Hazardous Substances
ESD	Electro Static Device	Rx	Receive
FET	Field Effect Transistor	SARFT	State Administration for Radio, Film and Television
FM	Frequency Modulation	SER	Serializer
GaAs	Gallium Arsenide	SiGe:C	Sillicon Germanium Carbon
GaN	Gallium Nitride	SMATV	Satellite Master Antenna Television
Gen	Generation	SMD	Surface Mounted Device
GPS	Global Positioning System	SPDT	Single Pole, Double Throw
GSM	Global System for Mobile communications	SYM	Symmetrical design of Doherty (main and peak device are the same type of transistor)
HBT	Heterojunction Bipolar Transistor	TD-SCDMA	Time Division-Synchronous Code Division Multiple Access
HDTV	High Definition Television	TCAS	Traffic Collision Avoidance Systems
HF	High Frequency (3-30 MHz)	TMA	Tower Mounted Amplifier
HFC	Hybrid Fiber Coax	TTF	Time to First Fix
HFET	Heterostructure Field Effect Transistor	Tx	Transmit
HPA	High Power Amplifier	UHF	Ultra High Frequency (470-860 MHz)
HVQFN	Plastic thermally enHanced Very thin Quad Flat pack No leads	UMTS	Universal Mobile Telecommunications System
IF	Intermediate Frequency	VCO	Voltage Controlled Oscillator
ISM	Industrial, Scientific, Medical - reserved frequency bands	VGA	Variable Gain Amplifier
LDMOS	Laterally Diffused Metal-Oxide-Semiconductor	VHF	Very High Frequency (30-300 MHz)
LNA	Low Noise Amplifier	VoIP	Voice over Internet Protocol
LNB	Low Noise Block	VSAT	Very Small Aperture Terminal
LO	Local Oscillator	WCDMA	Wideband Code Division Multiple Access
LPF	Low Pass Filter	WiMAX	Worldwide Interoperability for Microwave Access
MESFET	Metal Semiconductor Field Effect Transistor	WLAN	Wireless Local Area Network
MMIC	Monolithic Microwave Integrated Circuit		
MMPP	Main and peak devices realized separately in halves of push-pull transistor		

8. Contacts and web links

How to contact your authorized distributor or local NXP representative.

Authorized distributors

Asia Pacific:

http://www.nxp.com/profile/sales/asia_pacific_dist

Europe / Africa / Middle East:

http://www.nxp.com/profile/sales/europe_dist

North America:

http://www.nxp.com/profile/sales/northamerica_dist

Local NXP Offices

Asia Pacific:

http://www.nxp.com/profile/sales/asia_pacific

Europe / Africa / Middle East:

<http://www.nxp.com/profile/sales/europe>

North America:

<http://www.nxp.com/profile/sales/northamerica>

Web links
