

High-Voltage Power Transistors

A wide variety of high-power, medium-power, high-current, and fast-switching types in JEDEC TO-3, TO-39, TO-66, TO-202 VERSATAB, and TO-220 VERSAWATT package.

Features

- Multiple epitaxial structures
- n-p-n and p-n-p complementary pairs available
- High breakdown-voltage ratings
- High dissipations
- Good current and power-handling capabilities at high voltage

Applications

- High-voltage differential and operational amplifiers
- High-voltage inverters
- High-voltage, low-current switching and series regulators
- Audio output and amplifier circuits
- TV deflection circuits
- Neon indicators and NIXIE tube drivers
- Electronic ignition
- Off-line inverters
- Motor controls
- High-fidelity amplifiers

RCA Family	Structure	I_C Max. A	P_T Max. W	$V_{CEO(sus)}$ Range V	$V_{CE(sat)}$ Range V	Beta Selection Range		f_T Typ. MHz	Comp. Family

Darlington Power Transistors

Features

- DC current gain (h_{FE}) typically ranges from 1000 to 20,000 at I_C from 3 to 5 A
- Operation at I_C up to 10 A and supply voltages ranging from 40 to 120 V
- High gain permits transistors to be driven directly by integrated circuits
- In audio circuits eliminate the need for not only a driver transistor but also the diode across the output device
- Ideally suited for linear voltage regulators because of their high-power, high-beta, current-handling capability

Applications

- Audio power amplifiers
- Series and shunt regulators
- Driver circuits of automotive ignition systems
- Switching of inductive loads such as print hammers and solenoids
- Motor control applications
- Solenoid and hammer drivers
- Available in JEDEC package styles TO-3, TO-39, TO-66, and TO-220 (VERSAWATT)

RCA Family	Structure	I_C Max. A	P_T Max. W	$V_{CEO(sus)}$ Range V	$V_{CE(sat)}$ Range V	Beta Selection Range		f^* Min. MHz
						h_{FE} Min.	At I_C A	
RCS683	n-p-n	4	10	40-80	1.6	1000	2	20
