

## 1500 WATT BIDIRECTIONAL TRANSIENT VOLTAGE SUPPRESSOR

*Qualified per MIL-PRF-19500/507*

*Qualified Levels:  
JAN, JANTX, and  
JANTXV*

### DESCRIPTION

This popular Transient Voltage Suppressor (TVS) series for 1N6036 thru 1N6072A are JEDEC registered selections for bidirectional devices. All have the same high Peak Pulse Power rating of 1500 W with extremely fast response times. They are also available in military qualified selections as described in the "Features" section herein. They are most often used for protecting against transients from inductive switching environments, induced RF effects, or induced secondary lightning effects as found in lower surge levels of IEC61000-4-5. They are also very successful in protecting airborne avionics and electrical systems. Since their response time is virtually instantaneous, they can also protect from ESD and EFT per IEC61000-4-2 and IEC61000-4-4.

**Important:** For the latest information, visit our website <http://www.microsemi.com>.

### FEATURES

- Bidirectional TVS series in axial packages for thru-hole mounting.

**SYMBOLS & DEFINITIONS**

Symbol	Definition
$V_{WM}$	Standoff Voltage: Applied Reverse Voltage to assure a nonconductive condition.
$V_{(BR)}$	Breakdown Voltage: This is the Breakdown Voltage the device will exhibit at 25 °C.
$V_C$	Maximum Clamping Voltage: The maximum peak voltage appearing across the TVS when subjected to the peak pulse current in a one millisecond time interval. The peak pulse voltage is the combination of voltage rise due to both the series resistance and thermal rise and positive temperature coefficient ( $\alpha_{V(BR)}$ ).
$I_{PP}$	Peak Pulse Current: The peak current during the impulse. (See <a href="#">Figure 2</a> )
$P_{PP}$	Peak Pulse Power: The pulse power as determined by the product of $V_C$ and $I_{PP}$ .
$I_D$	Standby Current: The current at the standoff voltage ( $V_{WM}$ ).
$I_{(BR)}$	Breakdown Current: The current used for measuring Breakdown Voltage ( $V_{(BR)}$ ).
