

The documentation and process conversion measures necessary to comply with this revision shall be completed by 18 Dec 92

INCH-POUND

MIL-S-19500/356D  
19 June 1992  
SUPERSEDING  
MIL-S-19500/356C  
8 July 1980

## MILITARY SPECIFICATION

SEMICONDUCTOR DEVICE, DIODE, SILICON, VOLTAGE REGULATOR TYPES 1N4954 THROUGH 1N4996, 1N5968, 1N5969, AND 1N6632 THROUGH 1N6637, 1N4954US THROUGH 1N4996US, 1N5968US, 1N5969US, AND 1N6632US THROUGH 1N6637US JANTX, JANTXV, JANS, AND JANC

This specification is approved for use by all Departments and Agencies of the Department of Defense.

## 1. SCOPE

1.1 Scope. This specification covers the detail requirements for silicon, voltage regulator diodes. Three levels of product assurance are provided for each device type as specified in MIL-S-19500, and one level of product assurance for die.

1.2 Physical dimensions. See figures 1, 2, and 3.

1.3 Maximum ratings. Maximum ratings are as shown in columns 4, 8, and 10 of table VI herein, and as follows:

$P_T = 5 \text{ W}$  at  $T_L = 75^\circ\text{C}$ ,  $L = 3/8 \text{ inch}$  (see figure 3 and 6.2), derate  $50 \text{ mW}/^\circ\text{C}$  above  $T_L = 75^\circ\text{C}$ .  
 $P_T = 2.25 \text{ W}$  at  $T_A = 25^\circ\text{C}$ , derate  $15 \text{ mW}/^\circ\text{C}$  above  $T_A = 25^\circ\text{C}$ .  
 $-55^\circ\text{C} < T_{op} < +175^\circ\text{C}$  (ambient);  $-65^\circ\text{C} < T_{STG} < +200^\circ\text{C}$  (ambient).  
Barometric pressure reduced (high altitude operation): 8 mm Hg.

1.4 Primary electrical characteristics. Primary electrical characteristics are as shown in columns 2, 12, and 14 of table VI herein, and as follows:

$R_{eJL} = 20^\circ\text{C/W}$  (max) at  $L = 3/8 \text{ inch}$  1/  
 $R_{eJEC} = 7^\circ\text{C/W}$  (max) (surface mount)  
 $3.3 \text{ V dc} \leq V_Z \leq 390 \text{ V dc}$

## 2. APPLICABLE DOCUMENTS

2.1 Government documents.

2.1.1 Specifications, standards, and handbooks. The following specifications, standards, and handbooks form a part of this document to the extent specified herein. Unless otherwise specified, the issues of these documents are those listed in the issue of the Department of Defense Index of Specifications and Standards (DODISS) and supplement thereto, cited in the solicitation (see 6.2).

## SPECIFICATION

## MILITARY

MIL-S-19500 - Semiconductor Devices, General Specification for.

1/ Does not apply to surface mount devices.

Beneficial comments (recommendations, additions, deletions) and any pertinent data which may or be used in improving this document should be addressed to: Commander, Defense Electronics Supply Center, DESC-ECT, 1507 Wilmington Pike, Dayton, OH 45444-5270, by using the Standardization Document Improvement Proposal (DD Form 1426) appearing at the end of this document or by letter.

DISTRIBUTION STATEMENT A. Approved for public release; distribution is unlimited.

MIL-S-19500/356D

**STANDARD****MILITARY**

MIL-STD-750 - Test Methods for Semiconductor Devices.

(Unless otherwise indicated, copies of federal and military specifications, standards, and handbooks are available from the Standardization Documents Order Desk, Building 4D, 700 Robbins Avenue, Philadelphia, PA 19111-5094.)

**3. REQUIREMENTS**

3.1 Detail specification. The individual item requirements shall be in accordance with MIL-S-19500 and as specified herein.

3.2 Abbreviations, symbols, and definitions. The abbreviations, symbols, and definitions used herein are defined in MIL-S-19500, and as follows:

3.2.1 Symbols.

US - - - - - Surface mount device (square end cap).

$T_{EC}$  - - - - - Temperature, end cap.

3.3 Design, construction, and physical dimensions. The design, construction, and physical dimensions shall be as specified in MIL-S-19500, and figures 1, 2, and 3 herein.

3.3.1 Construction. Devices shall metallurgically bonded-thermally matched-noncavity-double plug construction in accordance with MIL-S-19500, 3.3.1.1, and 3.3.1.2 herein. The "US" version shall be structurally identical to the axial lead type except for lead attachment.

3.3.1.1 Diodes with  $V_z \geq 6.8$  V dc. Diodes with  $V_z \geq 6.8$  V dc shall utilize category I metallurgical bonds (see MIL-S-19500).

3.3.1.2 Diodes with  $V_z < 6.8$  V dc. Diodes with  $V_z < 6.8$  V dc shall utilize category I or category III metallurgical bonds (see MIL-S-19500).

3.4 Marking. Marking shall be in accordance with MIL-S-19500. It is permissible to have the type designation on more than one line. At the option of the manufacturer, the following marking may be omitted:

- a. Country of origin.
- b. Manufacturer's identification.
- c. Lot identification code.
- d. "1N" portion of the type designation.

3.4.1 Marking of US version. For US version only, all marking (except see 3.5 below) may be omitted from the body, but shall be retained on the initial container.

3.5 Polarity. The polarity of all types shall be indicated with a contrasting color band to denote the cathode end. Alternatively, for U suffix devices, a minimum of three contrasting color dots spaced around the periphery on the cathode end may be used.

MIL-S-19500/3560

## 4. QUALITY ASSURANCE PROVISIONS

4.1 Sampling and inspection. Sampling and inspection shall be in accordance with MIL-S-19500 and as specified herein. Lot accumulation period shall be 6 months in lieu of 6 weeks. This applies to TX and TXV quality levels only.

4.2 Screening (all levels). Screening shall be in accordance with MIL-S-19500 (table II), and as specified herein. Devices that exceed the limits of table I herein shall not be acceptable.

Screen (see table II of MIL-S-19500)	Measurements	
	JANS Level	JANTX and JANTXV levels
1/	Thermal impedance, see 4.5.2	Thermal impedance, see 4.5.2
7	Hermetic seal, gross leak	Hermetic seal, gross leak
9	$I_{R1}$ and $V_Z$	Not applicable
11	$I_{R1}$ and $V_Z$ ; $\Delta I_{R1} = 100\%$ of initial reading or 250 nA, whichever is greater; $\Delta V_Z = \pm 2.5\%$ of initial reading	$I_{R1}$ and $V_Z$
12	See 4.2.2	See 4.2.2
13	Subgroups 2 and 3 of table I herein; $\Delta I_{R1} = 100\%$ of initial reading or 250 nA, whichever is greater; $\Delta V_Z = \pm 2.5\%$ of initial reading	Subgroup 2 of table I herein; $\Delta I_{R1} = 100\%$ of initial reading or 250 nA, whichever is greater; $\Delta V_Z = \pm 2.5\%$ of initial reading

1/ Shall be performed anytime after screen 3.

4.2.1 Screening (JANC). Screening of JANC die shall be in accordance with MIL-S-19500, appendix H. As a minimum, die shall be 100 percent probed in accordance with group A, subgroup 2.

4.2.2 Power burn-in conditions. Power burn-in conditions are as follows:

$$I_Z \geq 25\% \text{ of column 8 } (I_{ZM}) \text{ of table VI.}$$

The test current ( $I_Z$ ) shall be adjusted to achieve a junction temperature of  $T_j = +175$  (+25, -30)°C. The diode shall be suspended in a free air ambient temperature equal to or greater than 25°C and equal to or less than 100°C. The mounting clips for leaded devices shall be a minimum of 3/8" from the device body; for "US" devices, the mounting clips shall contact the endcaps with  $T_A = 125^\circ$  maximum.

$$T_j = P_T (R_{eJL}) + T_L \text{ or } T_j = P_T (R_{ejendcap}) + T_{endcap} \text{ ("US" devices)}$$

MIL-S-19500/356D

4.3 Qualification inspection. Qualification inspection shall be in accordance with MIL-S-19500 and as specified herein.

4.3.1 Group E inspection. Group E inspection shall be conducted in accordance with MIL-S-19500 and group E inspection in table IV herein.

4.3.2 JANC devices. Qualification for JANC devices shall be via appendix H of MIL-S-19500.

4.4 Quality conformance inspection. Quality conformance inspection shall be in accordance with MIL-S-19500, and as specified herein. Group A inspection shall be performed on each subplot.

4.4.1 Group A inspection. Group A inspection shall be conducted in accordance with MIL-S-19500, and table I herein. End-point electrical measurements shall be in accordance with the applicable steps of table V herein.

4.4.2 Group B inspection. Group B inspection shall be conducted in accordance with the conditions specified for subgroup testing in table IVa (JANS) and table IVb (JANTX and JANTXV) of MIL-S-19500, and tables IIa and IIb herein. Electrical measurements (end-points) and delta requirements shall be in accordance with the applicable steps of table V herein.

4.4.3 Group C inspection. Group C inspection shall be conducted in accordance with the conditions specified for subgroup testing in table V of MIL-S-19500, and table III herein. Electrical measurements (end-points) and delta requirements shall be in accordance with the applicable steps of table V herein.

4.5 Methods of inspection. Methods of inspection shall be as specified in the appropriate tables and as follows:

4.5.1 Pulse measurements. Conditions for pulse measurements shall be as specified in section 4 of MIL-STD-750, unless otherwise specified herein.

4.5.2 Thermal impedance ( $Z_{eJX}$  measurements). The  $Z_{eJX}$  measurements shall be performed in accordance with MIL-STD-750C, method 3101. Read and record data ( $Z_{eJX}$ ) shall be supplied to the qualifying activity on one lot (random sample of 500 devices minimum). Twenty-two of these samples shall be serialized and they shall be provided to the qualifying activity for test correlation prior to implementation date on this specification or prior to shipments as applicable.

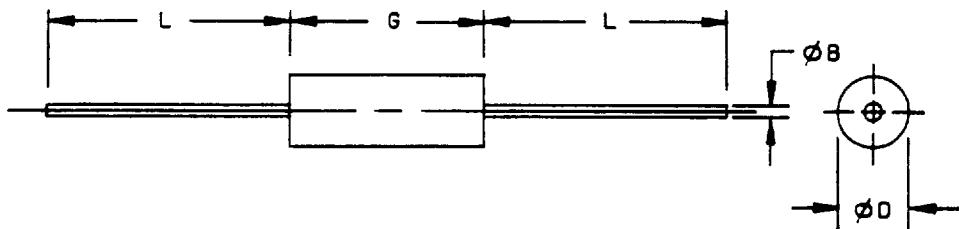

- a.  $I_H$  measurement current. . . . . 1 mA.
- b.  $I_H$  forward heating current. . . . . 40 A.
- c.  $t_H$  heating time . . . . . 10 ms.
- d.  $t_{MD}$  measurement delay time. . . . . 100  $\mu$ s.

The maximum limit for  $Z_{eJX}$  under these test conditions are  $Z_{eJX(max)} = 1.5^\circ\text{C/W}$ .

4.5.3 Regulator voltage ( $V_z$ ). Regulator voltage shall be measured in accordance with MIL-STD-750C, method 4022, except that the test shall be performed by the pulse method with  $t_p = 0.2$  to 300 ms. The thermal equilibrium requirement does not apply.

4.5.4 Voltage regulation ( $V_z$  (reg)). The breakdown voltage shall be measured at  $I_z = 10\%$  of column 8 of table VI and at  $I_z = 50\%$  of column 8 of table VI. The difference between these voltages shall then be determined and shall not exceed column 9 of table VI. The voltage measurement at  $I_z = 10\%$  of column 5 of table VI shall be a pulse measurement in accordance with 4.5.1. The measurement at  $I_z = 50\%$  of column 8 of table VI shall be made after current has been applied for  $30 \pm 3$  seconds. For this time interval, the device shall be suspended in free air by its leads with mounting clips with inside edge 0.375 to 0.50 inch from the body, and the point of connection shall be maintained at a temperature of  $25 (+8, -2)^\circ\text{C}$ . No forced air across the device shall be permitted. The  $\Delta V_z$  measurement may be performed after a shorter time interval following application of the test current if correlation can be established to the satisfaction of the Government.

Electrical measurements		See table V, steps 1, 3, 4, 5, and 6 (JANS) and steps 2, 3, and 4 (JANTX and JANTXV)				
<u>Subgroup 7</u>						
Temperature coefficient of regulator voltage	4071	$I_z = \text{column 5 of table VI}$ $T_1 = 25 \pm 5^\circ\text{C}$ , $T_2 = T_1 + 100^\circ\text{C}$ 3/	$\alpha V_z$	Column 14 of table VI		%/ $^\circ\text{C}$

1/ For sampling plan, see MIL-S-19500, (subgroups 1-6).

2/ Leaded samples from the same lot may be substituted for "US" devices.

3/ The sample plan for subgroup 7 is 22 devices, c = 0.

MIL-S-19500/356D

TABLE IV. Group E inspection (all quality levels) for qualification only.

Inspection 1/	MIL-STD-750		Sampling plan
	Method	Conditions	
<u>Subgroup 1</u>			
Thermal shock	1056	500 cycles, condition A	22 devices c = o
Electrical measurements		See table V, steps 1, 3, 4, and 6	
<u>Subgroup 2</u>			
Intermittent operation life	1037	$I_2 = 40\%$ of column 8 of table VI; $T_L = 95^\circ\text{C}$ min, $L = 3/8$ inch, $t_{on} = t_{off} = 3$ minutes minimum for 10,000 cycles. No heat sink or forced air cooling on the devices shall be permitted (see 3.2.2).	22 devices c = o
Electrical measurements		See table V, steps 2, 3, 4, 5, and 6	
<u>Subgroup 3</u>			
Destructive physical analysis		Photos of cross sections shall be submitted in the qualification report. Vendors shall retain duplicate photos.	
<u>Subgroup 4</u>			
Thermal resistance	3101 or 4081	$R_{eJL} = 20^\circ\text{C/W}$ (max) at 3/8" lead length. $+25^\circ\text{C} \leq T_R \leq +35^\circ\text{C}$ $R_{ejendcap} = 7^\circ\text{C/W}$ (surface mount); $R_{eJL} = 20^\circ\text{C/W}$ (max) at $L = 3/8"$ ; $R_{ejEC} = 7^\circ\text{C/W}$ (surface mount); reference temperature ( $T_R$ ) point at $L = 3/8"$ ; $L = 0$ (surface mount devices); $+25^\circ\text{C} < T_R < +35^\circ\text{C}$ .	
<u>Subgroup 5</u>			
Barometric pressure (reduced)	1001		

1/ For sampling plan, see MIL-S-19500, unless otherwise specified.

2/ For non-transparent devices, hermetic seal shall be performed after electrical measurements.

MIL-S-19500/3560

TABLE V. Groups A, B, C, and E electrical measurements.

Step	Inspection	MIL-STD-750		Symbol	Limits		Unit
		Method	Conditions		Min	Max	
1.	Reverse current	4016	DC method; $V_R = \text{column 11 of table VI}$	$I_{R1}$		Column 12 of table VI	$\mu\text{A dc}$
2.	Reverse current	4016	DC method; $V_R = \text{column 11 of table VI}$	$I_{R1}$		Column 13 of table VI	$\mu\text{A dc}$
3.	Regulator voltage (see 4.5.3)	4022	$I_Z = \text{column 5 of table VI}$	$V_Z$	Column 3 of table VI	Column 4 of table VI	$\text{V dc}$
4.	Small signal breakdown impedance	4051	$I_Z = \text{column 5 of table VI}$ ; $I_{sig} = 10\% \text{ of } I_Z$ ; $I_{sig} = 0.5 \text{ mA dc}$ (1N5968 only)	$Z_Z$		Column 6 of table VI	ohms
5.	Knee impedance	4051	$I_{ZK} = 1 \text{ mA dc}$ ; $I_{sig} = 0.1 \text{ mA dc}$ ; $I_{ZK} = 5 \text{ mA dc}$ (1N5968 only)	$Z_{ZK}$		Column 7 of table VI	ohms
6.	Forward voltage	4011	$I_F = 1.0 \text{ A dc, pulsed}$ (see 4.5.1)	$\Delta V_F$	1/		$\pm 50 \text{ mV dc}$ change from previous measured value

1/ Devices which exceed the group A limits, for this test, shall not be accepted.

1/ Ratings apply to all case outlines, unless otherwise specified.

MIL-S-19500/356D

4.5.5 Temperature coefficient of regulator voltage ( $\alpha V_z$ ). The device shall be temperature stabilized with current applied prior to reading regulator voltage at the specified ambient temperature.

## 5. PACKAGING

5.1 Packaging requirements. The requirements for packaging shall be in accordance with MIL-S-19500.

## 6. NOTES

(This section contains information of a general or explanatory nature that may be helpful, but is not mandatory.)

6.1 Notes. The notes specified in MIL-S-19500 are applicable to this specification.

6.2 Application data. Device power capability may be determined from figure 4 which shows maximum power dissipation versus lead temperature as a function of lead distance L from the device body.

6.3 Acquisition requirements. Acquisition documents should specify the following:

- a. Title, number, and date of this specification.
- b. Issue of DODISS to be cited in the solicitation, and if required, the specific issue of individual documents referenced (see 2.1).
- c. Lead formation material and finish may be specified (see 3.3.1).
- d. Project assurance level and type designation.

6.4 Suppliers of JANC die. The qualified JANC suppliers with the applicable letter version (example JANCA7218) will be identified on the QPL.

JANC ordering information
