- Note 1: Definition of optical data, see page 84
- Note 2: f_{FRAME}=75Hz, V_{DD}-V₀=15.8V, T_a=25°C
- Note 3: Recommended LCD driving may fluctuate about +/- 1.0V by each module.
- Note 4: Need to make sure of flickering and rippling of display when setting the FRAME Frequency in your set.
- Note 5: Background colour of the LCD changes depending on temperature. Between 40-50°C optical characteristics of the LCD like contrast and viewing angle change but the display remains readable.
- Note 6: Higher starting voltage of CFL and higher LCD driving voltage are needed while operating at 0°C. The lifetime of CFL will be reduced at 0°C
- Note 7: Storage at -20°C < 48 hr, T_a at 60°C < 168 hr
- Note 8: Measurement after 10 minutes of CFL operating. Brightness control: 100%
- Note 9: Starting discharge voltage is increased when LCM is operating at lower temperature. Please check the characteristics of inverter before applying.
