

SOURIAU

Connectors and interconnect systems for harsh environments

The company designs, manufactures and markets high performance interconnect solutions for severe environments from industrial broadline and universal ranges to complex system with integrated functions: filtering, high speed data transmission, hermetic seal, separation mechanism, remote handling, underwater mating, ...

Industrial

Aeronautical

Equipment & system

The dedicated end markets for SOURIAU's products are aeronautical, defense-space and industrial.

Railway
Geophysics
Manufacturing environment
Instrumentation
Automation & process

Civil & military aircraft
Helicopter
Weapon delivery system

Military marine Communications Satellites Launcher & missile

SOURIAU was established in 1917 and has been created by successive acquisitions of the industrial, aeronautical, defense and space activities of SOURIAU, JUPITER and BURNDY.

The Group's products are engineered and manufactured in the USA and Dominican Republic, Europe and Morocco, Japan and India, and sold by a worldwide sales and marketing organization, and in addition to SOURIAU's offices, a large network of licensed distributors and agents.

SOURIAU complies with most of national and international Quality Assurance Standards, production unit with ISO 14001.

<u>Locked</u>, the retention plate holds the contacts firmly in position <u>Unlocked</u>, the retention plate allows

the insertion/extraction of contacts without tooling

Description

Retention plate principle

Features

Mechanical

- Monobloc shell and insulator in thermoplastic material self-extinguishing to UL 94 VO.
- 180° screw coupling with positive audible safety latch.
- Scoop proof.
- Copper alloy contacts, machined or stamped and formed
- plating : gold on active part over nickel.
- Mechanical endurance :
- connector : 250 cycles mating / unmating,
- retention plate : 50 cycles mating / unmating.
- Retention force :
- # 20 \rightarrow 70 N
- # 16 \rightarrow 90 N.
- · Vibration :
- frequency range : 10-2000 Hz, 20 g
- 10 cycles in accordance with CEI 68-2-6

Electrical

- Withstand voltage: 1500 Vrms min or in accordance with DIN 57110b.
- Contact resistance < 10 mW.
- · Current rating per contact :
- machined contacts :
- # 20 (7 Amps), # 16 (13 Amps)
- stamped and formed contacts: # 20 (5 Amps), # 16 (10 Amps).

Environmental

- · Sealing:
- up to IP68
- · Working temperature :
- -40°C to +125°C. (-40°F to +257°F)
- · Resistance to salt spray :
- 48 h min
- > 1000 h (sealed mated connectors).
- Resistance to fluids:
- oil,
- petrol, fuel,
- lubricants
- other fluids : consult us.

Presentation

CLIPPER is a plastic low cost range of industrial connectors, UL & CSA approved.

Complementing SOURIAU product range CLIPPER offers :

- · a high sealing level :
- IP67 for the sealed plug (with o'ring and mating seal)
- IP68 for the enhanced sealed plug (with o'ring and a special mating seal).
 This version allows a permanent waterproof level when immersed at depths down to 30 meters.
- a retention plate system allowing insertion/extraction of the contacts without the need for tooling,
- facilities to use trade backshells with the electrical thread adaptor (PG).

CLIPPER range is composed of :

- 4 sizes of shell in molded black thermoplastic material (size 1/2/3/4).
- 7 contact layouts (4/9/14/18/26/31/40 contacts).
- #20, #16 contacts, machined or stamped and formed, crimp, solder or PC tail termination.
- An adaptor with electrical PG thread for PG backshells.
- · Backnut with grommet facilities.

Manual Crimping Tool

- Squeeze the plier handles until a final click sounds, release, the pliers should open by themselves.
- Fully insert the contact into the locator (corresponding gauge), the contact crimping lugs should be directed upwards, according to the drawing.
- Put the stripped wire in the crimping part until it comes in contact with the stopper plate. Make sure that no strands stick out of the crimping part.
- Squeeze the plier handles until a final click sounds, release, the pliers should open by themselves.
- · Check the overall aspect of the crimping.

- Push the cable into the contact barrel and make sure the cable strands stick out of the inspection hole.
- The pliers must be used on the jaws side.
- Squeeze the plier handles until a final click sounds, release, the pliers should open by themselves.
- Insert both wire and contact (or wire, reducing sleeve and contact) between the 4 jaws until stopped by the locator.
- Fully squeeze until a final click sounds, the pliers should open once the crimping is performed
- Extract the wire and crimped contact, then check the overall aspect of the crimping.

Automatic crimping tool

UTM2 Automatic crimping tool for Clipper

Description

Dimensions:

Electromechanical high speed semi automatic press is designed for mass production and is realized totally in assembled steel parts.

Voltage: 115VAC - 60 Hz Power.: 700 Watts

Weight: 300 lbs. (including one

crimp mechanism)
939.8x533.4x711.2 mm

(37.0"x21.0"x28.0")

Crimping Mechanism (left side miniapplicators)

| Contacts | AWG | Contact P/N | Crimp Mech. P/N |
|----------|-------|------------------------------|-----------------|
| 16 | 16-18 | CF16 PS 18RF CF16 SC 18RF | CM30-R |
| 20 | 20-22 | CF10 PS 18RF CF10 SC 18RF | CM31-R |

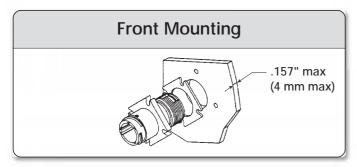

Press and crimping mechanism are rental. Please contact Customer Service.

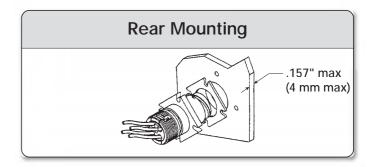

Panel mounting / Panel cut-out

Panel mounting

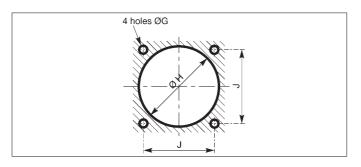

There are two types of mounting possible: through the front or through the back of the panel.

Panel cut-out

• For a sealed mounting, the seal gasket shall be used, making sure the surface is in good condition.

- Observe the drilling hole diameters indicated below.
- Use the recommended screws: M3 (all shells) or # 4.40 (shells 1 and 2) # 6.32 (shells 3 and 4)
- Respect the coupling torques indicated M3 (all shells): 0.70 N.m Max

| Shell | 1 | 2 | 3 | 4 |
|-----------------------|-----|-----|------|------|
| Dim . (inches) | | | | |
| Н | .85 | .98 | 1.22 | 1.61 |
| I | .84 | .97 | 1.13 | 1.44 |
| J | .13 | .13 | .15 | .15 |

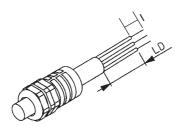

Wiring Instruction

Stripping Instructions

Use the upmost care with stripping operation:

- Use stripping pliers appropriate for the cable gauge and which are in perfect condition.
- In order to obtain a correct crimping and to maintain all of the connector sealing characteristics, the wires must have the dimensions described below.

Jacketed Cable Stripping Length

Make a 90° cut at the cable end.

carefully make an incision in order to remove the cable protection on a length LD as described.

| Shell size | 1 | 2 | 3 | | 4 |
|------------|-------------|---------|---------|---------|---------|
| layouts | Indifferent | | | 26 | 40 |
| LD mm | 60 | 65 | 65 | 80 | 100 |
| (inch) | (2.36') | (2.56') | (2.56') | (3.15") | (3.94") |

Caution: This operation should be realized without deterioration of wires insulation.

Then, follow the normal stripping instructions :

- single wire with machined crimping contacts,
- single wire with stamped and formed crimping contacts

Wire Stripping Length

• With machined crimping contacts

| Contact size | I = Wire stripping lenght |
|--------------|--|
| layouts | 6 mm (.236") |
| #20 | Ø over insulation > 2 mm \Rightarrow I = 5 (> .08" \Rightarrow I = .20") Ø over insulation > 2 mm \Rightarrow I = 7 (> .08" \Rightarrow I = .27") |

• With stamped and formed crimping contacts

| Contact diameter | I = Wire stripping lenght |
|------------------|------------------------------|
| #16 #20 | 4 mm (.157") 4 mm (.157") |
| | _ |

Instruction For Assembly

Insertion and extraction of contacts

Single wires

Contact insertion and extraction is performed without a tool thanks to te retainer plate system.

Insertion

- 1) With the thumb and index finger, squeeze the retainer plate flaps and pull backwards: the plate is then in the unlocked position.
- 2) Fully insert the wired contact in the cavity.

- 3) Repeat the same procedure for the other contacts.
- 4) Once again squeeze the retainer plate flaps and push forwards: the plate is then locked and retains the contacts (90 N of retention force for contacts of 1.6 mm dia.)
- 5) The plate can only be pushed backed if the contacts are correctly engaged (backup security)

Extraction

- 1) With the thumb and index finger, squeeze the retainer plate flaps and pull backwards: the plate is then in the unlocked position.
- Pull the contact wire: the the contact comes out of the cavity.

3) Repeat the same procedure for the other contacts.

Special case of jacketed cables

- 1) Locate the first contact and the corresponding cavity.
- 2) The wire should described a buckle as describe below.
- 3) Unlock the retainer plate as described above.
- 4) Fully insert the wired contact in the cavity.
- 5) Respect the same procedure for the other contacts
- 6) Once again squeeze the retainer plate flaps and push forwards : the plate is then locked

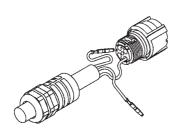

Special case of jacketed cables

7) Manually fully screw the adaptor and the backshell on the connector.

Caution: In the sealed version don't forget the O-ring.

- 8) Push forwards the cable of 10 mm in the backshell.
- Fully screw on the backshell with a wrench while keeping the adaptor with another wrench

Note: The plate can only be pushed back if the contacts are correctly engaged (backup-security)

Instruction For Assembly

Adaptor and PG electrical thread backshells

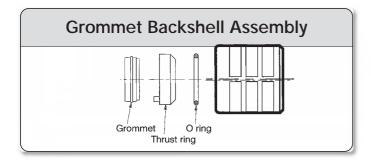

The CLIPPER connector must be equipped with an adaptor in order to use a PG electrical thread backshell (e.g.: cable clamp or sealing gland, or flexible conduits system backshells, etc.)

- Manually, fully screw the adaptor on the connector, the hexagonal nut towards the rear.
- 2) In the sealed version, cover the O-ring.
- Manually, fully screw the PG thread backshell of your choice.

Note: In the case of an elbow backshell, it is possible to adjust the position according to the angle desired.

- 1) Position the O-ring at the bottom of the backnut.
- 2) Run the backnut around the cable
- 3) Unlock the retainer plate.
- 4) Position the grommet in the thrust ring, resting against the retainer plate.
- 5) Insert the contacts through the grommet and the retainer plate.
- 6) Lock the retainer plate.
- 7) Screw the backshell.

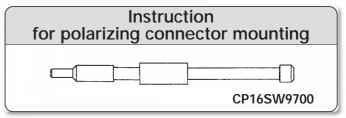

Heat shrink boot

Shrink sleeve as follows:

- 1) Use heat gun with an air deflector nozzle.
- 2) Adjust air deflector opening to accommodate tubing size. Turn switch ON. Wait until full heat output is reached.
- 3) Position the air deflector over section of tubing to be shrunk. Start at pre-shrunk section and work towards open end.
- 4) When tubing begins to shrink, move gun so that air is distributed in a band around the tubing circumference causing it to shrink evenly around the cable.
- 5) Move nozzle to adjacent section and shrink in the same manner. Repeat process on section at a time until entire length is shrunk.

Avoid excessive heat. Direct heat away from connector assembly to prevent damage.

When the insert is partially filled with contacts, place polarization contact into selected hole location in the FEMALE INSERT and push in until seated.

- Polarization contacts are used to provide keying capabilities for the CLIPPER series.
- Polarization contacts are used in the **socket-cavities** of standard plugs and reverse receptacles.

In order to lock the couple of chosen connectors, you have to let free the cavity in front of the polarization contact.

To avoid the connection with other connectors, you have to insert a contact in the cavity in front of the polarization contact.

General technical information

Degree of protection in accordance with CEI 529, DIN 40050, NF EN 60529 First index Second index Third index Protection against accidental or inadvertent contact. Prot. against ingress of foreign bodies. Protection against mechanical Protection against ingress of water Test 0 Protection against diagonal drop water drips (up to < of 15° of vertical) 0 No protection No protection 0 $\mathbb{P} \times 0$ Test Ball Ø 2 inch Protection against vertical drop water drips. Impact strength: 0,225 J 1 250 g Ball Ø .5 inch Impact strength: 0,5 J 2 3 250 g Protection against contact with the fingers prot. against solid foreign bodies with \varnothing 0.5 inch 3 Impact strength: 2 J Protection against tools wires or similar objects with $\varnothing>0.1$ inch, prot. against small foreign solid bodies with $\varnothing>0.1$ inch 500 g 5 Protection against water 15.7 incl 4 Impact strength: 6 J Protection against tools wires or similar objects with $\emptyset > .04$ inch, prot. against small foreign solid bodies with $\emptyset > .04$ inch ⊮×5 Full protection against accid. or inadv. contact. Prot. against interio injurious dust deposits.
